

Seemab Atif: First Term Examination 2026

OPF Girls College F-8/2, Class M-II H, Roll No 24683. Result dated 11 September 2026. Analysis prepared 14 September 2026 from the teacher-marked scripts of all eight subjects.

1. The short version

Seemab scored **322 out of 400 (80.5%, B++)**, and the teacher's remark was "well done". Her last school result, the May Test Series, was 59.3%, so this is a jump of more than 21 percentage points. The biggest turnarounds are in exactly the subjects that were failing in May: Biology went from 40% to 82%, Maths from 52% to 76% and Physics from 52% to 74%.

The most useful finding comes from reading every page. **Her written answers are good in every subject, and the marks she lost in Maths, Physics and Biology came mostly from the MCQ sheet.** In those three subjects plus Chemistry she got only 21.5 of 43 MCQ marks (50%), while her written work in the same four subjects was 135.5 of 157 (86%). In Urdu, English, Quran and Islamiat her MCQs were 38 of 42 (90%). So the science and maths MCQ sheet is by far the biggest place to gain marks next term: roughly 20 marks are sitting there.

The other patterns are smaller but they repeat across subjects. Sometimes she answers a slightly different question than the one asked, she writes too little for 3-mark questions, and her Islamiat long answer had no Quran or Hadith references. There is also a cluster of spelling and grammar errors in the English letter and the Urdu explanations.

2. Result by subject

Subject	May test	First Term	Grade	MCQs	Written (B+C)	Where the marks went
Urdu	86.0%	44/50 (88%)	A	10/10	34/40*	Jama mukassar definition wrong; first couplet not explained; spellings
Chemistry	86.0%	43/50 (86%)	A	8/11	34.5/39	3 MCQs; numerical stopped at moles instead of mass; shielding trend
English	80.0%	42/50 (84%)	B++	9/10	32.5/40	Letter (4.5/8) for spelling and grammar
Quran	78.0%	42/50 (84%)	B++	9/10	33/40	As-Sajdah long answer 3/8 (did not give the proofs asked)
Biology	40.0%	41/50 (82%)	B++	6.5/11	33/39	MCQs, two lost by changing a right answer; thin short answers

Mathematics	52.0%	38/50 (76%)	B+	3/10	35/40	7 MCQs wrong; cube word problem (area vs volume)
Physics	52.0%	37/50 (74%)	B	4/11	33/39	7 MCQs wrong; mass vs weight; no formula in helmet answer
Islamiyat	absent	35/50 (70%)	B	10/12	25/40	Long answer 3/10 with no ayat or ahadith; fasting answer 0/3
Total	59.3%	322/400 (80.5%)	B++	59.5/85 (70%)	260.5/315 (83%)	Attendance 43/49

* Urdu written figure is the teacher's grid. The red marks on the page add to 32, see section 6. MCQ and written columns are taken from the marks written on each script.

The MCQ split in one picture.

Science and Maths MCQs (Maths, Physics, Biology, Chemistry)	21.5/43 = 50%	
Science and Maths written work (same four subjects)	135.5/157 = 86%	
Language and Islamic MCQs (Urdu, English, Quran, Islamiyat)	38/42 = 90%	

3. The mistakes, grouped by cause

A. Science and Maths MCQs (about 21 marks lost, the biggest single leak)

These are not knowledge gaps in the usual sense; her written answers on the same chapters are strong. They fall into three kinds.

- **Confusable pairs**, the same root cause we found in the home papers. Examples: a point on the x-axis, she picked (0,4) which is on the y-axis (Maths Q6). LCM, she picked the HCF (Maths Q10). Velocity at the top of a throw, she gave the acceleration 10 m/s^2 (Physics Q4). Oxidation, she picked a reduction (Chemistry ix). Systematic vs random error (Physics Q2). Pyrimidine vs purine (Biology Q2). Maltose vs sucrose as the transport sugar (Biology Q9). Energy stored in a dam, she chose electrical instead of potential (Physics Q11). Hilf-ul-Fuzool vs Hudaybiyah and Tawaf-e-Ziarat vs Waqoof-e-Arafat (Islamiyat).
- **Quick calculation MCQs done in the head**: significant figures in 0.00305 (Physics Q1), K.E. with half mass and double velocity (Physics Q9), log to base $\sqrt{10}$ of 100^2 (Maths Q4), $|x| + 7 = 3$ has no solution (Maths Q7), moles in 16 g of oxygen (Chemistry vii). Each of these takes 20 seconds on rough paper and she clearly did not use it.
- **Changing a correct first answer**: in Biology Q6 and Q11 she crossed out the right option and filled a wrong one. In Maths Q1 and Q2 the teacher wrote "D.W" for overwriting, which the sheet forbids. The same second-guessing showed up in our Islamiyat exam-02.

B. Answering a slightly different question than the one asked

- Chemistry C2: asked for the *mass* of 3×10^{10} O₂ molecules, she calculated the moles (4.98×10^{-14}) and never multiplied by 32. Correct answer 1.59×10^{-12} g. The same gap cost MCQ vii.
- Physics 2(ii): she was given a *weight* of 600 N and treated it as mass, so her Moon weight (972 N) came out heavier than on Earth. It should be about 99 N.
- Maths Q4: she wrote the base area of the cube as l^3 (a volume), then carried a squaring error into the painting cost. She also never wrote the side length the question asked for; the teacher wrote " $L = ?$ ".
- Physics 2(iv): "support with a mathematical relation" was ignored. $F = \Delta p / \Delta t$ was the whole point; she scored 1/3.
- Islamiyat 2(vi): asked for *social* benefits of fasting, she gave hereafter and health benefits. 0/3.
- Quran Q4: asked for the proofs of the Hereafter, the deniers' doubt and its answer from As-Sajdah; she wrote about namaz, zakat and nations being punished. 3/8. Her shan-e-nuzul answers also described what the surah contains rather than why it was revealed.
- Urdu Q4: the teacher wrote پہلے شعر کی تشریح نہیں کی گئی (the first couplet was not explained). She retold the Meraj story in general instead. 2.5/5.

C. Thin short answers and definitions not in book words

- Chemistry B3 was one sentence for 3 marks, and it said protons equal *neutrons* (1.5/3).
- Biology: collaboration (one vague COVID example), plastids (functions only, no features), mitosis in asexual reproduction (said bacteria use mitosis, no examples, 1.5/3).
- Physics: "rolling friction is a friction that rolls on the ground" (2/3); displacement "the shortest distance travelled" with the symbol s instead of d .
- Islamiyat 2(iv): she did not know the actual conditions for Zakat (Muslim, adult, sane, nisab, one full year, free of debt). 1/3.

D. Islamiyat long answer without evidence (7 marks lost in one question)

Section C on physical and mental health got 3/10. It was 2.5 pages long and well headed, but it had no ayah and no hadith, and none of the book's points on this lesson (Al-Baqarah 247, the hadith of the two blessings صحت اور فراغت, "the strong believer is better", the sports the Sahaba liked, Islamic limits on games). It was mostly a general hygiene and ibadat list. This one answer explains most of why Islamiyat is her lowest subject.

E. Spelling and grammar

- **English comprehension:** the one lost mark in Q2 came off the summary (3/4), where she wrote "servies", "economical content" and the title "Digital Globilization".
- **English letter (4.5/8):** "montly", "assessment's result have been out", "we paned", "It will is going to have fun", "Your obediently" (should be Yours obediently), plus repetition. Also "Earnest: to earn something" (it means sincere, 0/1) and "A Losing opportunity" (should be lost).
- **Urdu:** spelling slips (her spelling, then the correct one) and one grammar mix-up. In grammar she defined jama mukassar using examples of jama salim (0/2).

She wrote	Correct
طبیعت	طبیعت
خُد	خود
مجھیں پتہ ہے	مجھے پتہ ہے

کھیں گے	کھائیں گے
ص written with معراج	معراج
as jama mukassar مجاہد سے مجاہدین	that is jama salim; mukassar is e.g. کتاب سے کتب

F. Factual mix-ups that the teacher did not penalise (fix them anyway)

- Quran Q3: wrote **Hazrat Ibrahim** three times where it should be **Jibreel (AS)** visiting Hazrat Maryam. Got 8/8 anyway.
- Biology: "Paleontology is the study of fossil fuels" (fossils); credited A.F.A. King with the sparrow experiment in India (it was Ronald Ross).
- Chemistry: ionic equation for $\text{Mg} + \text{H}_2\text{SO}_4$ written as $\text{Mg} + \text{H}_2 \rightarrow \text{MgH}_2$; Fe oxidation state given as +3 to +6 (it is +2 to +3); "NaCl solubility decreases with temperature".
- Physics: $\theta = 90^\circ$ labelled as maximum work (it is minimum, zero).

4. What she did really well

- **Written Maths 35/40.** Logarithms 8/8, distance formula, HCF, factorisation and the radical equation with a proper check all full marks.
- **Physics Section C 12/12.** Average speed and principle of moments both perfect, with correct unit conversions ($1 \text{ m/s}^2 = 12960 \text{ km/h}^2$) and a final answer with units every time. The missing-conclusion habit did not appear.
- **Biology Section C 11/12.** The malaria answer followed the full scientific method, and the enzyme answer had pepsin and trypsin examples and both graphs.
- **Chemistry numericals:** empirical formulas, oxidation states of N, and the bond-energy question (the same 436/243/432 question we set at home) all full marks.
- **Urdu MCQs 10/10** and all nine prose and poetry short answers full marks.
- **Quran comprehension 9/9** and a strong, well structured Maryam long answer.
- **Islamiat:** five of seven short answers full, hasad vs rashk explained exactly as the school wants, hadith translation perfect.
- Presentation in every subject is neat, headed and numbered, and she marks which OR option she chose.

5. What we can do to improve

1. Fix the science and maths MCQ sheet first (worth about 15 to 20 marks).

- Give her short school-style MCQ sheets: 10 or 11 questions, a separate bubble sheet, 15 minutes, no overwriting allowed. Two or three a week across Maths, Physics, Biology and Chemistry.
- Rule: every MCQ with a number in it gets worked on rough paper, even if it looks easy.
- Rule: do not change an answer unless you can say exactly why the first one is wrong. Fill the bubble only once.
- Add the new pairs from this paper to the confusable pairs drill: x-axis/y-axis, HCF/LCM, velocity/acceleration, systematic/random error, purine/pyrimidine, maltose/sucrose, oxidation/reduction, potential/electrical energy, jama salim/jama mukassar, Jibreel/Ibrahim.

2. "Circle what is asked" habit (worth about 8 to 10 marks). Before writing, underline the command word and the exact quantity asked (mass, side length, social benefits, first couplet, mathematical relation). The last line of the answer must state exactly that thing, with units. Our home papers should include a few questions that deliberately ask for the second step (mass not moles, weight given not mass).

3. A rule for 3-mark short answers. Book definition, then explanation, then one example or three clear points. One sentence is never enough for 3 marks.

4. Islamiyat and Quran long answers. Use a fixed shape: short introduction, at least one ayah or hadith (with the reference), the book's own points as headings, conclusion. Make a one-page list of two or three ayat and ahadith per taught lesson for her to memorise, starting with the health lesson, zakat conditions and the As-Sajdah proofs. Practise shan-e-nuzul as "why and when it was revealed", not "what is in it".

5. Language accuracy. A personal spelling list from this paper for English and Urdu, revised weekly. One formal letter per week (application to the Principal format, "Yours obediently"), checked for tense and repetition. In Urdu tashreeh, always explain the first couplet or sentence line by line before the general story, and name the poet correctly.

6. Keep what works. The written practice is clearly paying off (science written work 86%). Keep the numerical-heavy home papers, keep repeating core questions the school likes, and keep final answers with units.

6. Marking notes (checked against the scripts)

Every script was read twice, by a first reader and then by an independent deep check on 15 September that re-derived every MCQ answer and re-read every red mark. Both passes agree on all the figures below. I added up the teacher's marks on every script. Most totals match. Where they do not, the difference is in Seemab's favour, so there is nothing to ask the school to raise.

Subject	Official	Marks on script add to	Note
---------	----------	------------------------	------

Urdu	44	42	Grammar parts marked 2, 2 and 0 (clear zero, checked on the page) but circled as 6. No sign of a choice of parts or a deliberate regrade.
Biology	41	39.5	Grid reads 6.5, 22, 5.5, 5.5 (checked). MCQ Q7 (insulin by bacteria, Biotechnology) looks wrongly marked wrong, which would give back 1.
English	42	41.5	Half mark rounded up.
Chemistry	43	42.5	Half mark rounded up. Several answers with real errors received full marks.
Physics	37	37	MCQ Q6 (horse pulls cart, action acts on) was marked wrong for "cart"; arguable, not worth disputing.
Islamiat	35	35	Correct. The paper header prints "B, C and D: 40", but those sections are $21 + 10 + 7 = 38$, so with the 12 MCQs the paper is out of 50 as reported (header misprint).
Maths, Quran	38, 42	38, 42	Correct. The Maths triangle question 2(iv) had a misprint (points do not form a right triangle); she got full marks.

Honest reading: by the script arithmetic she earned about 317.5 rather than 322 (79.4%). That is still a very large improvement on May, and the lenient marking in a few written answers means we should not treat the school's full marks as proof those topics are secure.

7. How this compares with our home papers

Her home-paper average stands at 92.3% (progress overview v60). In May the school result was about 35 points below that; now it is about 12 points below. Most of the remaining gap is the science and maths MCQ sheet, since at home her MCQs run at about 91% (767 of 838 across all papers). The likely reason is that the school MCQs are done on a separate 15-minute bubble sheet under time pressure, with more quick-calculation items and trap options, which our home papers do not fully copy. Section 5 point 1 is meant to close exactly that.

8. English paper pattern (question paper shared 15 September)

Seemab sent photos of the English question paper, so the maximum marks per question are now confirmed rather than inferred. The paper follows the same $10 + 26 + 14 = 50$ shape as the other subjects, with 2 hours 10 minutes for Sections B and C. Choice is given only in the paragraph.

Question	What was asked	Max	Seemab
Section A	10 MCQs (grammar, literary devices, vocabulary)	10	9
Q2 comprehension	Unseen passage on globalization: (i) sum up and suggest a title 4+1, (ii) meaning of underlined word "intertwined" 1, (iii) 2, (iv) 2	10	9
Q3 (a) poetry	Paraphrase a stanza of "The Eagle" (Tennyson)	3	3
Q3 (b) poetry	Stanza of "Mowing" (Frost): theme 1, poetic devices with examples 2, meaning of underlined word "earnest" 1	4	3
Q4 (a) grammar	Six blanks: verbs in brackets as present or past participles	6	5
Q4 (b) grammar	Punctuate one sentence of direct speech	3	3
Q5 letter	Letter to the Principal requesting permission to hold a sports day (no choice)	8*	4.5
Q6 paragraph	80 to 100 words: "Impacts of Digital Globalization" OR "Nothing is Impossible" (she chose the second)	6*	5
Total		50	41.5 (given 42)

* The printed marks beside Q5 and Q6 are too blurred in the photo to read. Section C is printed as 14 marks and the smudges look like 08 and 06, which matches. Section B adds to 26 as printed. The Q3(b) sub-questions are numbered i, ii, iv on the paper (a school numbering slip).

What this means for practice. The letter carries 8 marks with no choice, and it is where she scored lowest (56%). Every other English question was 75% or higher. So the single best English habit to build is one timed letter a week (application or request to the Principal), checked for format, tense, spelling and repetition. A useful second is the "meaning of the underlined word" item, which appeared twice and cost her the "earnest" mark: she guessed from the look of the word ("to earn something") instead of the context.

Source scans filed in seemab-reports/school/2026-08-first-term-exam/ as progress-report.pdf, <subject>-script.pdf for all eight subjects, and the question papers (english-paper.pdf added 15 September).
