

Mistake Bank

Seemab's own mistakes, in her own words · 25 September 2026

This is not a report card. It is a list of your own mistakes, pulled out of every paper you have sat, quoted exactly as you wrote them, with the right answer beside each one and one short rule to carry forward.

Each subject has **one page**. Ten minutes before a paper, read only that subject's page. It is worth more than re-reading your notes, because everything here is something you have actually missed before.

How to use it

1. Open **only the page for the subject** you are about to sit.
2. **Red box first:** these are the mistakes that have happened more than once.
3. Nothing to tick and nothing to write. Just read, and *notice*.
4. **Green box last:** these are habits you have already fixed. That matters just as much as the open ones.

Four things that are the same in every subject

1. Confusable pairs

Your wrong MCQs are nearly always the **wrong twin of two similar things**: gradient and area, oxidising and reducing, group and period, lymphatic and immune, LCM and HCF, mode and class mark. You know the concept; you pick the wrong half. **So learn them as pairs, never alone:** on its own, each one sounds right. In the exam, cross out two options first, then compare the remaining pair against each other.

2. Units and names

The cheapest mistake there is. The working is completely right and then **g, mol, N, m/s²** or the **name** of the thing never gets written. It has cost marks in Chemistry, Physics, Biology and Maths. Write the answer, then look back at the last line once.

3. The closing sentence

When a question says **show that, hence, verify, prove, state** or **classify**, the working alone is not enough. A full sentence has to follow: "Hence P, Q and R are collinear." This ran for six papers, then you fixed it, and it still comes back now and then.

4. Copying a worked example's direction

When a question is the **reverse** of the book's example, the book's number comes to mind and gets written down. Chemistry exam-25 Q.7 gave ΔH as **-11** when the answer was **+11**; exam-23 had the ionisation equations the wrong way round. **Check which side is the reactant first**, then put the values in.

One more small thing

Sometimes the right answer is in your head and a different one reaches the paper. Physics exam-15 Q3: your reason proved **B** and you wrote **A**. Maths exam-18 Q7: your working reached **C** and you wrote **D**. After writing the reason, **look back at the options once**.

Physics

Units 1 to 6 and 9 · 14 papers

93.7% · 757.0/808 · MCQ 185/196. Your strongest subject. The marks you lose here are almost never about understanding the physics.

● **Repeat offenders (more than once)** Read these first. What has happened twice can happen a third time.

exam-01,02,04,07,08,09,11,13,16 exam-16 3(ii)(c) stopped at " $F_2/F_1 = A_2/A_1$ ", " $50 = 50$ "; exam-11 2(ix) stated Pascal's principle and left out the hydraulic lift application > **Hence the force is multiplied 50 times, the same as the ratio of the areas.** Count the parts of the question, then tick them off one by one. This alone cost about 17 marks over 9 papers, and the working was right every time.

exam-02,09,11,12,14,16 "Area :- m^3 "; " $15\ m$ " for the resultant of two forces; " $1.8\ m/s$ " for a time; " $6N$ " for a torque > m^2 , $15\ N$, $1.8\ s$, $N\ m$ Before writing a unit, ask what the quantity is: a length, a force, a time or a torque.

exam-04,08,09,15,16 exam-15 Q3, your own reason: "because spring balance is measuring force, measuring cylinder is used to measure volume..." and then the answer A; exam-16 2(iii)(a) listed $h = 4\ m$ and then substituted " $50 \times 10 \times 8$ " > That reason points to B; and in Work = mgh the height is $h = 4$, not the time After writing the reason, check that the letter and the value match it.

exam-13 3(i)(b) · exam-16 2(ii) " $210 \times 1.2 + 90 \times 0.6 = F(2.4)$ ", putting the plank's own $90\ N$ on the anticlockwise side > It sits to the right of the pivot, so it is clockwise: $210 \times 1.2 = 90 \times 0.6 + 2.4F$, $F = 82.5\ N$ Left of the pivot is anticlockwise, right of it is clockwise. All four of your distances were right.

● One-off slips

exam-12 2(xi)OR · 2(v)OR (5 marks) "Thermal Physics:- is the collective study of statistical mechanics... Nuclear Physics:- is the study of the structure... of atomic nuclei"; and for net force, your own examples: " $10N \rightarrow [+]$ ← $6N$, Net force :- $4N$ " > The question asked how physics works inside other subjects; those are branches of physics itself. And the question's own numbers, $18\ N$ and $25\ N$, were in the same direction, so the net force is $43\ N$ After the definition, always use the question's own numbers, not an example of your own.

exam-04 2(viii)OR · 3(i) "Energy that directly converts sunlight into electricity is known as solar radiation"; and as a zero-work condition, " $\theta = 0^\circ$, $W = FScos\theta = FS$ " > Solar radiation is energy from the Sun as electromagnetic waves. Zero work needs zero displacement or $\theta = 90^\circ$; $\theta = 0^\circ$ gives the maximum

exam-07 2(ii) · 3(iii)OR distance defined as the "longest path"; "materials that do not recover is called elastic limit"; the graph labels written out but no curve drawn > Distance is the total path length. A material that does not recover is inelastic. When a graph is asked for, the curve has to be drawn

School paper 2(ii) · short answers treated a $600\ N$ weight as a mass and got a Moon weight of $972\ N$; "rolling friction is a friction that rolls on the ground" > About $99\ N$ on the Moon. Weight is in newtons, mass in kilograms One sanity check after the answer: is this figure sensible?

Spelling (no marks lost yet) "accelaration", "deaccelaration", "definatin", "skydriver", "feul", "Triangle", and "it's" for the possessive > acceleration, deceleration, definition, skydiver, fuel, triangle, and its

● **Fixed: you do not do this any more** You fixed every one of these after being told once.

Gradient vs area wrong on both exam-12 and exam-14 (3 marks on exam-14) > exam-15 got both right on one paper, and exam-16 held it again. This pair is closed

Renewable vs non-renewable exam-04 had the two definitions swapped, twice > exam-14, in your words: "naturally replenished and can be used repeatedly"

MCQs 60% on Maths exam-17 (7 Sep) > Physics exam-15 scored 29/30, 97%. One thing changed: rough working for MCQs

91.3% · 904.5/991 · MCQ 250/276. You have sat more Chemistry papers than anything else, so this list is the longest.

● **Repeat offenders (more than once)** Read these first. What has happened twice can happen a third time.

exam-18 · exam-20 Q21,Q30 · exam-22 “group :- 2nd” and “period :- 2+3+10 = 13 or 3”; on exam-22, for $3s^2$, “8+10 = 18” with the +10 struck out, leaving Group 8 › $1s^2 2s^2 2p^3$ is **Group 15, Period 2**. $3s^2$ is **Group 2, Period 3** Group is the valence electrons, plus 10 in the p block. Period is how many shells are filled.

exam-21 Q14 · exam-22 Q6 “**Nickel**” for the Haber catalyst, then “**platinum**” for the **margarine catalyst** › Haber is **iron**, margarine is **nickel** Learn the whole catalyst table in one go, not one process at a time.

exam-18 · exam-23 Q.6,Q.7,Q.8 · exam-25 Q.9 “64 mol/g”; “ $0.1 \times 2 = 0.2$ ” with no unit; the gas **named only inside the equation, never in words** › **g/mol, 0.2 mol**, and an English name such as **ammonia gas is produced** Write the unit with every answer, and the name in words when a name is asked for. Still open.

exam-19 · exam-20 · exam-22 · exam-23 “ $1 \text{ K}_2\text{CO}_3 + 2\text{HCl} \rightarrow 2\text{KCl} + \text{H}_2\text{O} + \text{CO}_2$ ”: **balancing perfect, no state symbols. On exam-20 that part was left blank** › $2\text{KOH}(\text{aq}) + \text{H}_2\text{SO}_4(\text{aq}) \rightarrow \text{K}_2\text{SO}_4(\text{aq}) + 2\text{H}_2\text{O}(\text{l})$: both jobs Underline the verbs (balance, add, label, state) and tick them off one at a time.

● One-off slips

exam-23 MCQ 1 · Q.2(ii) **called water the base in $\text{NH}_3 + \text{H}_2\text{O} \rightleftharpoons \text{NH}_4^+ + \text{OH}^-$; then “H3O { bronsted acid }”** › Here water is the **acid**, and the acid is **HCl**; H_3O^+ is a product The Bronsted acid is left of the arrow, donating the proton. A product is never the acid.

exam-23 Q.3 · Q.8(i) “ $\text{H} + \text{NO}_3 \rightarrow \text{HNO}_3$ ”, “ $\text{H}_2 + \text{SO}_4 \rightarrow \text{H}_2\text{SO}_4$ ”; and “**Sodium:- $4\text{Na}_2 + \text{O} \rightarrow 2\text{Na}_2\text{O}$... magnesium:- $2\text{Mg} + \text{O} \rightarrow 2\text{MgO}$** ” › $\text{HNO}_3 \rightarrow \text{H}^+ + \text{NO}_3^-$. And oxygen in air is always **O₂**: $4\text{Na} + \text{O}_2 \rightarrow 2\text{Na}_2\text{O}$ Whole molecule left, the ions it splits into right, and a charge on every ion.

exam-25 Q.7 (3 marks, the biggest single loss) “ $(436+151) - 2(299) = 587 - 598 = -11 \text{ kJ/mol}$ ”, then “**enothermic... because it’s ΔH° is negative**” › The question was $2\text{HI} \rightarrow \text{H}_2 + \text{I}_2$, the **reverse** of the book’s Example 8.1, so the answer is **+11 kJ/mol, endothermic** Your formula and your closing sentence were right. Only the direction was reversed.

exam-19 Q13, Q14, Q20 “**two oppositely charged ions**” for a metallic bond; “**gain electrons**” for **electropositive**; “**Ca₂NO₃**” for **Ca²⁺ with NO₃⁻** › Metallic is a **sea of delocalized electrons and metal cations**; metals **lose** electrons; **Ca(NO₃)₂** The bracket goes on the polyatomic ion, not the metal.

exam-17 3(iv) · exam-18 3(i)(c) “ $8(12)+7(1)+1(16)+1(14) \rightarrow 92+7+16+14 \rightarrow 129 \text{ g/mol}$ ”; and “**molar mass of CHO₂ :- 45 g**”, giving $18 + 45 = 0.4 \text{ mol}$ › 8×12 is **96**, so **133 g/mol**. And the compound is **C₂H₂O₄** with **M = 90**, so **0.2 mol** Once the molecular formula is found, every later step uses the **molecular molar mass**.

School paper C2 · B3 · no marks lost **asked for the mass of 3×10^{10} O₂ molecules, stopped at the moles; B3 read “protons equal to neutron”; Fe oxidation given as +3 to +6; “NaCl solubility decreases”** › Mass = moles $\times 32 = 1.59 \times 10^{-12} \text{ g}$. Fe goes **+2 to +3**. NaCl dissolves **more** in hot water. A 3-mark answer is definition + explanation + example

● **Fixed: you do not do this any more** You fixed every one of these after being told once.

State symbols exam-19, exam-20 and exam-22 all had perfect balancing and no symbols › exam-23 Q4 and Q6, then exam-25, all carried **full symbols**

Four pairs, and oxidising vs reducing exam-20 inverted oxidising/reducing twice; exam-21 missed Bohr vs orbitals, electron affinity vs ionisation energy, giant covalent vs simple molecular, and “catalyst changes ΔH ” › exam-22 got **all of them right**

Chapter 10 the new-chapter half of exam-23 scored 70% › exam-25 scored **35/35, a clean 100%** a week later, with MCQs **10/10**

91.9% · 790.45/860 · MCQ 196/208. Eight re-tests out of eight came back right. Only one pair is still open.

● **Repeat offenders (more than once)** Read these first. What has happened twice can happen a third time.

exam-16 Q12 · exam-18 MCQ 5 **the same wrong option both times: lymphatic system, for the system of "leukocytes, tonsils, thymus, spleen" that removes pathogens** > **Immune system**. The book gives the lymphatic system's job as **maintain tissue fluid homeostasis** The only mistake that has repeated and is still open. Read both rows of Table 5.2 together.

exam-12 2(ix) · exam-13 3(iv)OR **"Pepsin works best in medium acidic in stomach at 2.00 pH and trypsin works best in medium alkaline in small intestine at 8.00 pH."** > The values are right. The **why** was missing: each enzyme's **active site only holds its shape at its own optimum pH** When a question says why or explain, add a sentence of cause after the fact.

exam-09 · exam-14 · exam-17 3(ii)(c) **the table headed "Mitosis / Meiosis" with the row "cells divides only once / cell divide twice"** > The question was **Mitosis vs Meiosis II**, and Meiosis II is itself a single division Write both column headers first and re-read which two things are being compared.

exam-12 · exam-16 · exam-17 · exam-18 **"100 to 150 of ATP per day"; "Pyruvic acid ----> Ethyl + CO₂"; "1. ATP 2. NADP."; and ATP's bonds called "hydrogen bonds"** > **moles; ethyl alcohol; NADPH; and they are high energy bonds** (Ch7 p101) The last word, or the last letter, is what goes missing most often.

exam-01,07,08,09,11,12,18 exam-18 Q.7(ii): **"In order:- Glycolysis, Link reaction, Krebs cycle, Electron transport chain."** and nothing further > All four right, but the question separately asked **which stage uses oxygen** Count the roman numerals: (i), (ii), (iii). This habit broke at exam-13.

● One-off slips

exam-11 2(i)OR · exam-21 2(xi)OR · exam-09 3(i) · exam-14 MCQ 19 **"Liver cells... without cytoplasmic organelles. This makes them the most metabolically active cells"; "Taxonomy... classification of organelles"; "Paleontology... based on fossil fuels"; glucose called a disaccharide** > Liver cells are active because they have **an abundance** of organelles; taxonomy classifies **organisms**; palaeontology, **fossils**; glucose is a **monosaccharide** One word (with or without) reverses the whole meaning.

exam-15 2(iii) **DNA's location right ("Nucleus (chromosomes)") but its role written as "Tools for translation , protein synthesis."** > That is **the RNA row**. DNA: **Component of chromosomes. Store and pass on genetic information** Keep a finger on the row when copying from a table. You wrote DNA's real role correctly on the next page.

School paper, short answers and MCQs **one-line answers for 3 marks ("bacteria use mitosis"); on Q6 and Q11 the right answer was crossed out and a wrong one filled in** > Bacteria use **binary fission**, not mitosis. And 3 marks means three points Change a first answer only when you have a solid reason.

Spelling (no marks lost) **"Meosis", "Bcz", "generaly", "hapolid", "equilateral plate", "Glycolysis take places", "sperate"** > **Meiosis, because, generally, haploid, equatorial plate, Glycolysis takes place, separate**

● **Fixed: you do not do this any more** You fixed every one of these after being told once.

Eight re-tests, eight right law vs theory, phragmoplast vs cleavage furrow, hydrophobic vs saturated, purine vs pyrimidine > exam-16 got **all four right**. The purine one closed after **five months**

Meiosis divides twice exam-14 had it the wrong way round twice > exam-15 re-tested it as an MCQ and as a 5-mark question, and **both were right**

Comparing the right two things exam-17 3(ii)(c) compared mitosis with the whole of meiosis > exam-18 Q.9 scored **a clean 8/8**, and you struck out your own "Mitosis" header for "Meiosis II" before writing anything

92.7% · 810.0/874. Your written work is almost always correct; the marks usually go on the last line.

● **Repeat offenders (more than once)** Read these first. What has happened twice can happen a third time.

exam-16 Q22 · exam-18 Q9 for $(2a - 1, b + 3) = (9, 5)$, worked out $2(5) - 1 = 9$ and boxed "a: 9" and "5 = b" > The question asked for a: $a = 5$ (and $b = 2$). 9 is the whole first element After finding a, re-read what the question actually asked for. This one is still open.

exam-12 · exam-15 · exam-16 · exam-18 log 72 worked out perfectly (1.8572) with no law named at any step; on exam-12, "additive property" > Name it at each step: **product law**, **power law**. And that one is the **Additive Identity property** When the question says name the law, write the name beside every line, even when the working is right.

exam-10,12,13,15,16,17,18 (11 times) stopped at " $(7p - 6q)^{2n}$ "; stopped at "Char:- / 5.67×10^{-2} "; exam-17 3(ii)(b) wrote $5+5=10$ and nothing after it > $\pm(7p - 6q)$; the characteristic is -2; Hence P, Q and R are collinear. Show that, hence, verify, state, classify: every one of them needs a closing sentence. This cost about 2 marks a paper.

exam-03,11,13,16,17,18 (six papers) "square root = $\pm(x^2 - 4x + 3)^{1/2}$ "; exam-13 had " $\pm [a(5a-3)]^{1/2}$ "; exam-17 had no $\pm$ at all > $\pm(x^2 - 4x + 3)$. It is the root, not the square Two checks on the last line: is the $\pm$ there, and is the outer square gone?

exam-11 · exam-13 · exam-18 Q7 exam-18 Q7's working ended at " $-1 \leq x \leq 4$ " (option C) and the letter written was D; exam-13 read Rs. 600,000 as Rs. 6,000,000 Write the letter the working points to, and check the question's numbers against the paper Commit to one answer: do not write a second one like "or $1/2$ " beside it.

● One-off slips

exam-19 Q.6 (4 marks, the biggest single loss) the marbles probability question was not attempted at all, nowhere in eight pages > $P(\text{green})=3/10$, $P(\text{blue})=1/5$, $P(\text{not red})=1/2$, and the expected number of 4s in 300 rolls is 50 You answered both probability MCQs correctly, so the topic is there. Unit 11.3 needs one written run-through.

exam-17 Q2, Q7 · exam-19 MCQ 5, MCQ 8 "75" for $\sqrt{48}+\sqrt{27}$; "-5" for $|-8|+|3|$; "vertex of the right angle" for where the right bisectors meet; "class mark" for the most frequent value > $7\sqrt{3}$; 11 ($|-8| = 8$); right bisectors meet at the mid point of the hypotenuse (the vertex answer belongs to the altitudes); and it is the mode Two different radicals do not add under the sign, and $| |$ always gives a positive. The mode one was speed only: you wrote "mode = 6" correctly in Q5(iii) on the same script.

exam-17 Q10 · exam-18 Q3 wrote a coordinate instead of the option letter and then wrote over it, so it could not be read; exam-18's numbering ran 1,2,3,4,5,7,8,9,10 and one question was missed > On an MCQ write only the letter, clearly. And count that all ten are there In a board paper an answer that cannot be read scores nothing. Physics exam-16 fixed both.

exam-19 Q.9(i) · School paper Q4 the steps were right ("Draw a line segment $AB = 6\text{cm} \dots$ ") but AB came out at about 5 cm on the page; the school paper gave a cube's base area as " l^3 " > Measure AB at 6 cm (that gives the scalene triangle, not an isosceles one). Base area is l^2 ; l^3 is the volume In a construction, mark the base with a ruler first, then pick up the compass.

● **Fixed: you do not do this any more** You fixed every one of these after being told once.

Sign pattern for cubes exam-03, 04, 15 and 16 wrote a^3+b^3 as $(a-b)(a^2+ab+b^2)$ > exam-18 Q4 and Q5 were both right, with full working

The closing sentence lost three times on exam-17 > exam-18 3(ii) scored a clean 8/8; exam-19 lost it nowhere on the whole paper. In your words: "P, M, Q are collinear, with M b/w P and Q."

$|-8|$, the negative bound, verifying, and Unit 6 exam-17 Q7, Q8 and 2(v) all went > exam-18 got all three right. And exam-19 scored 11/11 on Unit 6, which was never taught in class

exam-02 (13 Sep) 30/46, then exam-03 (18 Sep) 32.5/38. In five days the MCQs went from 57% to 90%.

● **Repeat offenders (more than once)** Read these first. What has happened twice can happen a third time.

exam-02 Q.23, Q.25, Q.27 **حسد** حضرت زینب and حضرت ام عطیہ, رشک (wanting someone's blessing to end, p86); حضرت ام سلیم (the literate, famous طبیبہ, p135); حضرت ام سلیم (Anas bin Malik's mother, p136) Learn each pair together. On the same paper you wrote **ام سلیم** correctly in Q.2(ii). Two of these three were right on exam-03.

exam-03 Q.3, Q.4 • School Section C **the 8-mark notes had good Urdu headings with roughly one sentence under each. The school paper scored 3 out of 10, with no ayah and no hadith anywhere** › An 8-mark note needs **6 to 8 real points**, with an ayah or hadith and its reference.

The roza answer left out **سورة البقرہ ۱۸۳**; Fatah Makkah left out **بنو خزاعہ** and the 360 idols List the headings first, then write at least two sentences under each one.

exam-02 Q.2(i) • exam-03 Q.3 **announced «ووتاخ» and then gave only one outcome; three benefits of fasting were asked for and two were given** › Any second outcome, for example **بنو** **ہوازن و بنو قنیف کی طاقت ٹوٹ گئی** Number the points first (1, 2, 3) to match what was asked, then fill them in.

exam-02 Q.20, Q.25 **wrote the correct letter D on both, then crossed it out for a wrong one (C on Q.20, B on Q.25)** › Your **first answer was right** both times On Q.13, Q.21 and Q.24 you also changed an answer and were right, so the habit itself is fine. It misfired twice.

● One-off slips

exam-02 Q.10 to Q.20 (Bab 3 Seerat) **eight of eleven wrong, among them تیس درجے and ۹ ہجری** (p29) ستائیس درجے (p54) ۱۰ ہجری, غدير خم (p56) Bab 3 was the weakest part of the file, and exam-03 put all of it right.

exam-02 Q.3 **opened straight with the heading «جمع وتدوین قرآن مجید» and wrote the name as «حضرت عمر بن فاروق»** › It should open with **سورة الحجرات** and its translation. The name is either **عمر فاروق** or **عمر بن خطاب** Start every long Islamiat answer with an ayah or a hadith.

exam-03 MCQ 5 **wrote "5." and left it blank, then carried on at "6. C"** › The answer was **حضرت عباس** (p45) This is a blank, not a wrong answer. **Never leave an MCQ empty**: a wrong guess costs nothing more.

School paper 2(vi) • 2(iv) **asked for the social benefits of fasting, gave the hereafter and health ones (0/3); and the conditions for zakat were not known (1/3)** › The conditions: **Muslim, adult, of sound mind, owns the nisab, a full year passed, free of debt** Underline the key word first: social, spiritual or health. Each wants a different answer.

● **Fixed: you do not do this any more** You fixed every one of these after being told once.

MCQs 17 out of 30 on exam-02 (57%) › **9/10** on exam-03, and the one lost was left blank, not answered wrongly

Confusable pairs exam-02 had hasad/rashk and Shifa/Umm Atiyya the wrong way round › exam-03 Q.7 and Q.8 got **both right**

Section B exam-02 left Q.2(i) unfinished › exam-03 scored **a clean 12/12**: zakat vs ushr, Aam-ul-Wufood and Zain-ul-Abideen

Honestly: there are only **two** Islamiat papers so far, and nearly every mistake above comes from the first one. This page is short because the record is short.

Tarjuma-tul-Quran

9 surahs · 2 papers

exam-01 (13 Sep) 43/50, exam-02 (19 Sep) 33/38. Lifetime MCQ **19/20**.

● **Repeat offenders (more than once)** Read these first. What has happened twice can happen a third time.

exam-02 Q.2(i), Q.4 · exam-01 Q.2(ii), Q.2(v) **your first of Musa AS's three stages is really the book's second; the miracles given to Sulaiman AS were right but** دولت، حکومت اور شان و شوکت **was missing; for Al-Hajj you wrote** «جو ایمان لاتے ہیں» Book p49: Allah helps those جو اللہ تعالیٰ کے **And Luqman gives eight** separate pieces of advice; two of your headings landed on the same one When the book prints a **numbered list**, give the book's own count and order. Do not build a new list in your own words.

exam-02 Q.2(iii) «سورة السجدة کی تلاوت کرنے والے کے لیے اس کی فضیلت اور اجر کا ذکر احادیث میں آیا ہے۔» This says a virtue *exists* without saying *what* it is. The answer: the Prophet ﷺ would not sleep without reciting السجدة الملك "Its virtue is mentioned in the ahadith" earns nothing. Write the virtue itself.

● One-off slips

exam-01 Q.2(i) **for Zakariya AS's dua you gave the translation** «اے میرے رب! بے شک میری بھڑیاں کمزور ہو گئی ہیں...» and **no Arabic at all** › That is سورة مریم آیت 4, the verse before the dua. The book's وعائیں box (p15) has اور 5 آیت 6 When a dua is asked for, **write the Arabic**, and take it from the book's dua box.

exam-01 Section B(b), word 5 رَوَّاسٍ translated as «ٹھہرنے کی جگہ» (firm mountains) The other four were right. Keep a short list of word meanings and look at it daily.

exam-01 Q.4 **for the scene on the Day of Judgement you gave the earthquake and the panic, but not the book's own imagery** › The book (p48, 49): **nursing mothers will forget their infants, pregnant women will miscarry, people will seem intoxicated.** The disbelievers' **humiliation in this world** was owed too For a scene question, give the book's images, not a summary of your own.

exam-02 MCQ 1 **حضرت عثمان رضی اللہ عنہ for who accepted Islam on hearing Surah Taha** › حضرت عمر فاروق رضی اللہ عنہ (book p18) This is the **only** Quran MCQ you have got wrong all year. School paper Q4 · Q3 **As-Sajdah asked for the proofs, the doubt and its answer; you wrote about namaz and zakat (3/8); and named حضرت مریم's visitor three times as حضرت ابراہیم** › It was حضرت جبریل علیہ السلام. And shan-e-nuzool means **why and when** a surah was revealed, not what is in it The Jibreel one cost nothing then, but it would in a board paper.

● **Fixed: you do not do this any more** You fixed every one of these after being told once.

MCQs one wrong in the whole year › **19/20 lifetime**. On exam-01 MCQ 8 you wrote A, struck it out cleanly for C, and C was right

Long answers As-Sajdah scored 3/8 on the school paper › exam-02 Q.3 **Musa and Firaun 8/8:** both duas, both signs, the magicians' faith and the drowning

Comprehension › **9/9** on exam-01, and you translated a verse correctly from memory even though your class does not write tarjuma

Honestly: there are only **two** Quran papers, 12 marks lost out of 88, and **one** wrong MCQ all year. There is very little here to count. One habit is worth fixing: when a line runs out of room you squeeze the overflow into the **right margin** of the next line, which makes the scans hard to read.
