Section Breakdown

Section	Description	Score	%	Marks Lost
A	MCQs (12 × 1) — Anatomy, classification, cells, organelles, molecules	12 / 12	100 %	0
B	Short Answers (11 × 3) — Definitions, kingdoms, cells, nucleic acids, carbohydrates, taxonomy	28 / 33	84.8 %	5
C	Long Answers (4 × 5) — Branches, biological method, molecular biology, careers	12 / 20	60 %	8
Total	Biology — exam-01-ch1-6 (Version 3)	52 / 65	80 %	13

Detailed View

Biology — exam-01-ch1-6

52 / 65 (80.0 %) Grade A

Ch 1 (Science of Biology) → Ch 6 (Molecular Biology) · 3 April 2026

12 / 12

SECTION A · 100 %

28 / 33

SECTION B · 84.8 %

12 / 20

SECTION C · 60 %

52 / 65

TOTAL · 80 %

Strengths

- **Perfect MCQs (12/12)** — strong conceptual understanding across all 6 chapters
- **Biological method** — Laveran 1882, observations, hypothesis, experiment well explained
- **Strong molecular biology** — RNA types, central dogma, transcription & translation
- **Good comparison tables** — prokaryotic vs eukaryotic, mesophyll vs epidermal
- **All 11 Section B questions attempted** with solid answers
- **Four careers in biology** — Biotechnology, Fisheries, Medicine, Horticulture all described well

Areas to Improve

- **Time management:** Q.5 in Section C not attempted — lost 5 marks (biggest single loss)
- **Precise terminology:** missed alpha helix, beta pleated sheet, A-T/G-C base pairing
- **Table-header errors:** swapped polysaccharide/disaccharide column headers (Q.viii)
- **Ring structure confusion:** purines (double ring, big) vs pyrimidines (single ring, small)
- **Specific examples:** Linnaeus dates (1707-1778), female *Anopheles*, collagen/keratin/haemoglobin
- **Four kingdoms detail:** descriptions too brief, missing specific examples per kingdom
- **Binomial nomenclature:** missing importance, italicisation rule, Linnaeus dates

Key Takeaways

- **MCQ foundation is solid** — perfect 12/12 shows the conceptual understanding is there.
- **Section C is the main gap** — 60% vs 100% in Section A. The 5 unattempted marks from Q.5 alone account for nearly half of all marks lost.
- **Section B is strong but not perfect** — 84.8% with marks lost on terminology precision and table labelling errors, not conceptual gaps.
- **This was the first exam attempted** — subsequent exams (Physics, Chemistry) show dramatic improvement in time management and answer completeness.

Things to Fix Before the Next Biology Exam

- **Time discipline:** practice under timer — always leave 20 minutes for the last long question. Never leave a 5-mark question blank.
- **Flashcards for terminology:** pair each key term with its textbook definition (alpha helix, beta pleated sheet, A-T/G-C base pairing, etc.)
- **Examples notebook:** one page per Biology chapter with scientist names, dates, and 3 examples per concept.
- **Proofreading checklist:** before moving on, verify column headers, formula labels, and axis labels match the content.
- **Kingdom details:** memorise at least 3 organisms per kingdom (Protista, Animalia, Plantae, Fungi) with distinguishing features.
