Section Breakdown

Subject Performance Card

Strengths

- Perfect MCQ score (12/12) — demonstrates strong recall across all 9 chapters covering 2 full semesters of content.
- Stoichiometry calculations (Q3(iii)): all three sub-parts (moles in 49g H_2SO_4 ; molecules in 0.5 mol CO_2 ; mass of 2 mol NaOH) solved correctly with structured working.
- MgCl_2 formation (Q2(vi) OR): electron-transfer steps, ion formation, and electrostatic attraction all stated precisely.
- Electronic configurations in sub-shell notation (Q2(iv)): Na and Cl both correct.
- Ionization energy trends (Q2(v)): definition and both group/period trends with correct reasoning.
- Exo/endothermic definitions with ΔH signs and examples (Q2(x)): full marks.

Areas for Revision

- Oxidizing/reducing agents (Q3(iv)):** Identification reversed for $\text{Zn} + \text{CuSO}_4$. The entity that loses electrons is oxidized and is the reducing agent (Zn). The entity that gains electrons is reduced and is the oxidizing agent (CuSO_4). This error also appeared in exam-04-ch7 (June 12) — targeted practice needed urgently.
- Atomic number definition:** Stated as “number of protons and electrons” in two questions. The definition is protons only.
- Dynamic equilibrium characteristics vs conditions (Q2(xi) OR):** Temperature and pressure constant are conditions to reach/maintain equilibrium, not characteristics of the state. Key characteristics are equal rates and constant concentrations.
- Suspension type (Q2(ii) OR):** A suspension is heterogeneous, not homogeneous.

Comparison vs Previous Chemistry Attempts

Exam	Date	Chapters	MCQs	Sec B	Sec C	Total	%
exam-01-ch1-2	Apr 12	Ch 1–2	12/12	30/33	18/20	60/65	92.3%
exam-02-ch3-5	Apr 17	Ch 3–5	12/12	30.5/33	17/20	59.5/65	91.5%
exam-03-ch6	May 12	Ch 6	12/12	31/33	17.5/20	60.5/65	93.1%
exam-04-ch7	Jun 12	Ch 7	12/12	28/33	16/20	56/65	86.2%
exam-12-ch1-9	Jun 24	Ch 1–9	12/12	28.5/33	17/20	57.5/65	88.5%
