LONG (C)

Section-by-Section Breakdown

Section	Marks Available	Marks Earned	%	Performance
A — MCQs (12 × 1)	12	12	100%	100%
B — Short Answers (best 8 × 3)	24	24	100%	100%
C — Long Answers (best 2 × 5)	10	8.5	85%	85%

Section C — All Attempted (Best 2 Counted)

Question	Variant	Score	Status	Key Issue
Q.3(i)	Empirical/molecular formula + Aspirin/Vinegar/TNT	4.5/5	COUNTED	Aspirin empirical formula incorrect (C4H2O4 vs C9H8O4)
Q.3(ii)	Moles calculations + mass calculations	4/5	COUNTED	Carbon molar mass used as 14 instead of 12
Q.3(iii)	Ionic equations for 3 reactions	3/5	DROPPED	Net ionic products wrong for Mg+H2SO4 and Zn+HCl
Q.3(iv)	K + H2O: balance + moles + atoms	2.5/5	DROPPED	Atom count: used M×NA instead of n×NA; unit error

STRENGTHS THIS ATTEMPT

- 9th consecutive perfect MCQ (12/12) — now 119/120 all-time
- Section B: all 10 scoring answers at full 3/3
- All mass-mole interconversions in B fully correct
- Ionic formula derivation (NaCl, Mg3N2, K2SO4) — correct method shown
- Caffeine GCD reduction (+2) executed correctly
- Equation balancing with atom-count checking — excellent habit
- mg→g unit conversion shown explicitly

AREAS FOR IMPROVEMENT

- Ionic equations: charges (H⁺, Cl⁻) and (aq) state symbols must appear on every ion
- Net ionic products: H2 is released as gas, not bonded (MgH2, ZnH2 are wrong)
- atom count = moles × NA (not molar mass × NA)
- C = 12 g/mol (not 14) — N = 14, C = 12
- Check GCD before simplifying empirical formula — if GCD=1, formula is already empirical

Chemistry Subject History

#	Date	Exam	Score	%	MCQ	Grade	Trend
1	12 Apr 2026	exam-01-ch1-2	64/65	98.5%	12/12	A+	—
2	17 Apr 2026	exam-02-ch3-5	59.5/65	91.5%	12/12	A+	-7.0pp dip
3	12 May 2026	exam-03-ch6	44.5/46	96.7%	12/12	A+	+5.2pp recovery

Chemistry subject average: (98.5 + 91.5 + 96.7) ÷ 3 = **95.6%** (updated from 95.0%)
