

CORRECTION (2026-06-24, DEEP RE-VERIFICATION AT ATIF'S REQUEST)

The first marking of this paper scored 57.5/65 (88.5%, A). A page-by-page re-check against the answer key corrected three errors: Q3(iv) (a correct first attempt was overlooked; the reversed redo was the only part marked), Q2(iii) (a 0.5-mark slip was deducted a full mark), and a Section B addition error (29.5 written as 28.5). Benefit of the doubt was also extended on three borderline items (Q2(ix)OR, Q2(xi)OR, Q3(ii)). Corrected score: 62.5/65 (96.2%, A+).

Chemistry Exam 12 — Chapters 1-9

Seemab Ali • Class 9 • Federal Board (FBISE) • Per-Exam Overview
Attempt: 2026-06-24 • Corrected report (supersedes first marking of 57.5/65)

Section A — MCQs: 12/12 (100%)

12/12 • 100%

Section B — Short Answers: 31.5/33 (95.5%)

31.5/33 • 95.5%

Section C — Long Answers: 19/20 (95%)

19/20 • 95%

Subject Performance Card

Strengths demonstrated

- Perfect MCQ 12/12 — 5th consecutive Chemistry perfect-MCQ paper. Consistent recall across all 9 chapters.
- Stoichiometry Q3(iii): all three sub-calculations correct (moles, molecules, mass).
- MgCl_2 ionic bond formation: electron-transfer diagram with charges and electrostatic attraction.
- Sub-shell electronic configurations for Na and Cl: both correct with valence counts.
- Ionization energy: definition plus both period and group trends with reasons.
- Equation balancing with atom verification: systematic and complete.
- Correct redox direction on Q3(iv) first attempt: Cu^{2+} reduced, Zn oxidized.

Areas requiring revision

- **Name oxidizing/reducing agents explicitly.** State which species is the oxidizing agent and which is the reducing agent at the end of every redox derivation. (Q3(iv))
- **Trust a correct first working.** The page-7 first attempt had the right answer. The redo introduced errors. Cross out a flawed redo, not the original. (Q3(iv))
- **Use the exact reactant given in the question.** CuSO_4 was specified; CuO was used in the first attempt. (Q3(iv))
- **Atomic number = protons only.** Not "protons and electrons." (Q2(iii))
- **Suspension is heterogeneous, not homogeneous.** Particles settle on standing. (Q2(ii) OR)
- **Dynamic equilibrium: characteristics vs conditions.** Constant concentrations and equal rates are characteristics; constant temperature is a condition. (Q2(xi) OR)

Chemistry Exam History (comparison vs previous attempts)

Exam	Chapters	Date	MCQ	Total	%	Grade
Exam 01	Ch 1-2	2026-04-12	12/12	64/65	98.5%	A+
Exam 02	Ch 3-5	2026-04-17	12/12	59.5/65	91.5%	A+
Exam 03	Ch 6	2026-05-12	12/12	57.5/65	88.5%	A+

Exam 04	Ch 7	2026-06-12	12/12	60/65	92.3%	A+
Exam 12 ★	Ch 1-9	2026-06-24	12/12	62.5/65	96.2%	A+

Seemab's 2nd-best Chemistry result (96.2%), behind only Exam 01 (98.5%), and her highest-scoring paper on the full Ch 1-9 syllabus.
