

Seemab — Mathematics Exam Overview

SINGLE ATTEMPT

exam-11-ch1-2-4-5-7 (Version 2) | Units 1, 2, 4, 5, 7 | Federal Board Annual 2026

Date: 5 July 2026 | Total Marks: 65 | Time: 2 h 30 min | 2nd attempt — re-sit of the 3 July 2026 paper

63.5/65

TOTAL SCORE

97.7%

PERCENTAGE

A+

GRADE

12/12

MCQ (100%)

Section Breakdown

Section A (MCQ)

12/12 100%

Section B (Short Q)

32/33 97.0%

Section C (Long Q)

19.5/20 97.5%

MCQ Results (All 12 Correct)

#	Topic	Key	Seemab	Result
1	Quotient rule of exponents	B	B	✓
2	$\sqrt{a}$ ($a > 0$) is non-negative real	C	C	✓
3	Scientific notation of 0.000307	B	B	✓
4	$\log_3 81 = 4$	C	C	✓
5	$\log 18 = \log 2 + 2 \log 3$	B	B	✓
6	$x^2 - 9x + 20 = (x - 4)(x - 5)$	A	A	✓
7	$HCF \times LCM = P \times Q$	C	C	✓
8	Standard form $ax + b = 0$	B	B	✓
9	$ 3x - 6 = 9 \Rightarrow \{5, -1\}$	A	A	✓
10	Distance (0,0) to (5,12) = 13	C	C	✓
11	Midpoint A(4,-2), B(-2,8) = (1,3)	B	B	✓
12	HCF of $x^2 - 4$ & $x^2 - x - 2 = (x - 2)$	B	B	✓

12th consecutive perfect MCQ score (attempts 14-25). Math MCQ all-time: 83/84 (98.8%).

Per-Question Summary

Question	Variant	Topic	Marks	Earned	Notes
Q2(i)	OR	Equivalent radicals	3	3	$-2, 625, x^{-6}$ all correct (stray "or $1/2$ " noted, no mark lost)
Q2(ii)	Main	True/False + counterexample	3	3	Counterexample now included (was missing 3 Jul)
Q2(iii)	OR	Notation conversion	3	3	All three correct
Q2(iv)	Main	Find x (logs)	3	2	Sign slip $2^{-3} \rightarrow -8 \rightarrow 1/8$; missed $x = -4$ in (iii) (same as 3 Jul)
Q2(v)	Main	Log using tables	3	3	3.6609, 4.9685, 1.7324 correct
Q2(vi)	Main	Factorize completely	3	3	Both correct
Q2(vii)	Main	HCF by factorization	3	3	Fully correct this time (3 Jul mis-copied a constant)
Q2(viii)	Main	Solve $(2x+3)/5 = (3-4x)/8$	3	3	$x = -1/4$ correct
Q2(ix)	Main	$ 4x-3 =13$	3	3	$\{4, -5/2\}$ correct
Q2(x)	Main	Collinearity check	3	3	$AB=BC+AC$ verified
Q2(xi)	Main	Midpoint $\rightarrow k$, then PA	3	3	$k=2$, $PA=\sqrt{41}$ correct
Q3(i)	OR	Log-table evaluation	5	5	Antilog 1732 correct, working fully consistent (fixed 3 Jul's slip)
Q3(ii)	OR	Square root + cube factorization	5	5	(a) $\pm$ root now written; (b) both correct
Q3(iii)	Main	Linear equation + inequality	5	5	Sign error (a) and blank (b) from 3 Jul both fixed — huge swing
Q3(iv)	Main	Rectangle proof (coordinate)	5	4.5	Sides/diagonals/midpoints correct; conclusion sentence not stated (-0.5)

Headline: a strong re-sit (97.7%, A+) driven almost entirely by a full recovery in Section C — the sign error and the blank inequality from 3 July are both fixed, taking Q3(iii) from 1/5 to 5/5. Only 1.5 marks lost in total this time: a sign slip on negative exponents, a repeated missing negative root, and one dropped conclusion sentence.

Performance Strengths

- Perfect MCQ for the 12th consecutive exam
- Q3(iii) fully corrected: sign error and blank sub-part from 3 July both fixed — $1/5 \rightarrow 5/5$
- Q3(ii)(a) square root taken all the way to $\pm(2a+3b)$ this time
- Q3(i) log-table evaluation internally consistent, correct antilog 1732
- Q2(vii) HCF factorization fully correct (fixed the mis-copied constant from 3 July)
- Q2(ii) counterexample now included in full
- All linear equations, absolute value equations, and coordinate geometry clean and correct

Areas to Improve

- **Negative exponent sign confusion (new):** 2^{-3} briefly evaluated as -8 before correcting to $1/8$ — 1 mark lost
- **Missing negative root (recurring, 2nd time):** $x^2=16 \Rightarrow$ only $x=4$ given, $x=-4$ omitted again — the identical gap from 3 July
- **Conclusion sentence dropped:** rectangle proof numbers all correct but "hence ABCD is a rectangle" never written — was present and correct on 3 July
- **Pattern to watch:** two attempts in a row now missing a $\pm$ root on a quadratic-type answer — make "state both roots, then check domain" an automatic habit

Math Subject Performance History

#	Date	Exam	Score	%	MCQ	Sec B	Sec C
1	18 Apr 2026	exam-01-ch1-2	65/65	100%	12/12	33/33	20/20
2	22 Apr 2026	exam-03-ch4-5-7	60.5/65	93.1%	12/12	29.5/33	19/20
3	25 May 2026	exam-04-ch4	57/65	87.7%	12/12	26/33	19/20
4	5 Jun 2026	exam-07-ch8	64/65	98.5%	11/12	33/33	20/20
5	26 Jun 2026	exam-10-ch1-2-4-5-7-10	61/65	93.8%	12/12	32/33	17/20
6	3 Jul 2026	exam-11-ch1-2-4-5-7 (1st attempt)	58.5/65	90.0%	12/12	31.5/33	15/20
7	5 Jul 2026	exam-11-ch1-2-4-5-7 (2nd attempt) NEW	63.5/65	97.7%	12/12	32/33	19.5/20

Subject average after this attempt: $429.5/455 = 94.4\%$ (up from 93.8%). MCQ all-time: 83/84 (98.8%). Math remains the strongest of the four subjects.

Note for parent

This was a re-attempt of the exact same paper Seemab sat two days earlier (3 July), and it shows real, targeted improvement rather than luck: the two costliest mistakes from that first sitting — a sign error that flipped an equation's answer, and an entire 2-mark sub-part left blank — are both fixed, lifting the score from 90.0% to 97.7%. The 1.5 marks still lost are small and specific: a momentary mix-up with negative exponents, a second miss on stating both roots of $x^2=16$, and one dropped concluding sentence on an otherwise fully-worked geometry proof. All three are easy, mechanical fixes rather than gaps in understanding.
