

Seemab: Cumulative Progress Overview

Federal Board Class 9 | All Subjects | All Attempts | Version 29 | Updated: 5 July 2026 | 25 attempts across 4 subjects

Note on this version (v29): Math exam-11-ch1-2-4-5-7 re-attempted (63.5/65, 97.7%, A+). This is a 2nd sitting of the exact same paper Seemab scored 58.5/65 (90.0%) on 3 July — both errors that cost the most marks that day (a sign error in Q3(iii)(a) and a blank Q3(iii)(b)) are fixed. Overall now 93.0% (1511/1625). The Math subject average rises from 93.8% to 94.4% and stays the strongest of the four subjects. This attempt also breaks the 9-exam "stopping before all sub-parts" streak — nothing was left blank this time. All prior figures carry forward unchanged.

Streak Broken: Stopping Before All Sub-Parts (was 9 of 9 exams)

Every one of the last 9 attempts before this one (Physics exam-04-ch6 through Math exam-11 1st attempt) had lost marks to an unfinished or entirely skipped sub-part. **Math exam-11 2nd attempt (5 Jul) breaks that streak** — every sub-part across all 15 Section B/C questions was attempted and completed, including the exact Q3(iii)(b) inequality that was left blank on 3 July. This is the drill fix (re-read the full question and explicitly tick off every keyword before moving on) visibly working.

New Watch-Item: Missing ± Root on Quadratic-Type Answers (2 of last 2 Math occurrences)

- Math exam-11, 1st attempt (3 Jul):** Q2(iv)(iii) $\log_2(x^2-3)=\log_2 13 \Rightarrow x^2=16 \Rightarrow$ gave only $x=4$, missed $x=-4$. Cost 0.5 mark.
- Math exam-11, 2nd attempt (5 Jul, this exam):** the identical sub-question, the identical gap — $x=4$ given again, $x=-4$ still missing. Cost 0.5 mark again.

Drill fix: whenever an equation reduces to $x^2 = k$, write $x = \pm\sqrt{k}$ as a standing reflex, then check each root against the domain before dropping one. Two occurrences in a row on the same question is enough to call this a confirmed pattern rather than a one-off slip.
