Syllabus: Unit 1 – Real Numbers, Unit 2 – Logarithms, Unit 4 – Factorization and Algebraic Manipulation, Unit 5 – Linear Equations and Inequalities, Unit 7 – Coordinate Geometry

Total Marks: 38

Time Allowed: 1 Hour 45 Minutes

Version 18 (B)

General Instructions:

1. Attempt **ALL** questions. **There are no choices in this paper.**
2. Section A carries 10 marks, Section B carries 12 marks and Section C carries 16 marks.
3. In Section A, write the **letter** of the correct option clearly. Do the rough working for each MCQ on your answer sheet. Cutting or overwriting an answer will not be credited.
4. Write all working for Section B and Section C. Marks are awarded for correct working, not only for the final answer.
5. Answer **every part** of each question. Where a question says *verify*, *show that*, *name* or *state*, write that step and the final conclusion in words.
6. Use of a calculator is not allowed.

2(iii)	Using the distance formula, show that the points A(-2, -1), B(1, 3) and C(7, 11) are collinear. Write your conclusion.	4

SECTION C — Long Questions ($2 \times 8 = 16$ Marks)Attempt **ALL** questions. There are no choices.

Part	Question	Marks
3(i)	(a) Find the square root of $x^4 - 8x^3 + 22x^2 - 24x + 9$ by the division method. [4] (b) Find the HCF and the LCM of $x^2 - 11x + 28$ and $x^2 - 3x - 28$ by factorization, and verify that $\text{HCF} \times \text{LCM} = \text{product of the two polynomials}$. [4]	8
