

SEEMAB

Class 9 · SSC-I

Progress Report · 10 April 2026

Performance at a Glance

2

Tests Taken

88.9%

Average Score

97.7%

Highest (Physics)

80.0%

Lowest (Biology)

Attempts Log

Date	Subject	Exam	Score	Percentage	Grade
3 Apr 2026	Biology	exam-01-ch1-6	52 / 65	80.0%	A
7 Apr 2026	Physics	exam-01-ch1-2	63.5 / 65	97.7%	A+

Subject Performance

Physics

63.5 / 65 (97.7%) Grade A+

exam-01-ch1-2 · Unit 1 (Physical Quantities & Measurement), Unit 2 (Kinematics) · 7 April 2026

Section A (MCQs)	Section B (Short)	Section C (Long)	Total
12 / 12 (100%)	32.5 / 33 (98.5%)	19 / 20 (95%)	63.5 / 65 (97.7%)

Strengths

- Perfect MCQ score — strong conceptual grasp
- Clean step-by-step numerical working (Maglev, Shoaib Akhtar, free fall)
- Effective diagrams: target boards, distance/speed-time graphs, vernier caliper
- Strong command of SI units and scientific notation
- Consistent quality across all 3 sections

Areas to Improve

- Formula direction:** wrote $a = (v_i - v_f)/t$ instead of $(v_f - v_i)/t$ — -0.5 mark
- Complete numerical answers:** gave LC formula but did not calculate for 20 divisions (expected $1/20 = 0.05$ mm) — -1 mark
- Always double-check the formula direction before using it

Biology

52 / 65 (80.0%) Grade A

exam-01-ch1-6 · Ch 1 (Science of Biology) through Ch 6 (Molecular Biology) · 3 April 2026

Section A (MCQs)	Section B (Short)	Section C (Long)	Total
12 / 12 (100%)	28 / 33 (84.8%)	12 / 20 (60%)	52 / 65 (80.0%)

Strengths

- Perfect MCQ score (12/12) — strong conceptual understanding
- Excellent biological method answer (Laveran 1882, observations, hypothesis, experiment)
- Strong molecular biology: RNA types, central dogma, transcription & translation
- Good comparison tables (prokaryotic vs eukaryotic, mesophyll vs epidermal)
- All 11 Section B questions attempted with solid answers

Areas to Improve

- TIME MANAGEMENT:** Q.5 in Section C not attempted — lost 5 marks (biggest single loss)
- Precise terminology:** missed alpha helix, beta pleated sheet, A-T/G-C base pairing
- Table-header errors:** swapped polysaccharide/disaccharide column headers (Q.viii)
- Ring structure confusion:** purines (double ring, big) vs pyrimidines (single ring, small)
- Specific examples:** Linnaeus dates (1707-1778), female Anopheles, collagen/keratin/haemoglobin

Pending Assessment

Exams prepared but not yet attempted:

- Chemistry:** exam-01-ch1-2 (Nature of Chemistry, Matter), exam-02-ch3-5 (Atomic Structure, Periodic Table, Chemical Bonding)
- Mathematics:** exam-01-ch1-2 (Real Numbers, Logarithms), exam-02-ch3-5 (Sets & Relations, Factorization, Linear Equations & Inequalities)

- **Physics:** exam-02-ch3-4-9 (Dynamics-I, Dynamics-II, Nature of Science)
- **Biology:** no new exam beyond exam-01-ch1-6 yet

No exams created yet for: English · Urdu · Islamiyat

Overall Assessment

Consistent Strengths Across Subjects

- **MCQ mastery** — perfect score in both subjects; strong conceptual foundation
- **Structured writing** — clear definitions, step-by-step working, effective use of tables and diagrams
- **Numerical problem solving** — Physics numericals were flawless (conversions, kinematics, graphs)
- **Recall of major concepts** — biological method, central dogma, SI units, vernier caliper

Priority Weak Areas

- **Time management in Section C (Long Questions)** — in Biology, 5 marks were lost because Q.5 was not attempted at all. Section C scored only 60% in Biology vs 95% in Physics. This is the single biggest mark loss.
- **Precise terminology** — especially in Biology (alpha helix, beta pleated sheet, base-pairing rules, ring structures). Examiners look for exact textbook terms.
- **Specific examples and data** — dates, scientist names, examples per kingdom, protein functions. Long answers lose 0.5-1 mark per missing example.
- **Careful labelling** — table headers, formula directions, axis labels. Small checking errors cost easy marks.

Study Recommendations

- **Time discipline drill:** practice full 2h 30min papers under timer; always leave 20 minutes for the last long question
- **Flashcards for terminology:** pair each key term with its textbook definition (alpha helix, beta pleated sheet, A-T/G-C, etc.)
- **Examples notebook:** one page per biology chapter with scientist names, dates, and 3 examples per concept
- **Proofreading checklist:** before moving on, verify formula direction, column headers, and axis labels
- **Next priority:** attempt the ready Chemistry and Mathematics exams to widen the performance baseline
