Performance Summary

Strengths

- Perfect MCQs (13th consecutive across all subjects) — no knowledge gaps at recall level.
- 10 of 11 Section B questions full marks (97.0% on the section) — both re-scanned questions (2(ii), 2(iii)) scored full marks.
- Lipid structure (Q.3(iv)) — 5/5, complete structural and functional coverage.
- Mitosis vs meiosis (Q.3(iii)) — 7 of 8 comparison rows flawless.
- When content is written, it is almost always factually correct.

Areas to Address

- 2 of 3.75 marks lost from skipping the stem-cells half of Q.3(ii) entirely (a two-part question).
- Metabolic pathway (Q.2(xi)): definition given but the "intermediate molecules" point omitted (−1).
- Paleontology (Q.3(i)): "fossil fuels" written instead of "fossils" (−0.5).
- Mitosis (Q.3(iii)): "animal cell" used instead of "somatic cells" (−0.25).

Key Message: Two-Part Questions Need Both Halves

The single largest deduction on this paper (2 of 3.75 marks) came from completing only the first half of Q.3(ii) — the plant-vs-animal comparison table — and never starting the second half (stem cells / haematopoietic stem cells). This is the same "stopping before every required sub-part" pattern seen recently in other subjects. Recommended drill: before answering, count how many distinct things the question asks for and tick each one off before moving on.
