

Biology Exam 12: Per-Exam Overview

Chapters 1-7 (Full Syllabus) | Seemab Ali | Federal Board (FBISE) Class 9 | Attempt: 2026-07-22 | Version 1 | Total Marks: 65

12/12 SECTION A (MCQS)	29/33 SECTION B (SHORT)	19.3/20 SECTION C (LONG)	60.3/65 TOTAL, 92.8%	A+ GRADE
---------------------------	----------------------------	-----------------------------	-------------------------	-------------

Corrected marking. The original overview (58.3/65, 89.7%, Grade A) misread Section A as 10/12. Seemab wrote her twelve MCQ answers as a numbered list on the last scan page rather than a bubble panel; sloped ruled lines caused Q.9 and Q.12 to be misread as blank. Re-read at 400 DPI, all twelve are correct — Section A corrects to 12/12, crossing the 90% A+ boundary. Section B and Section C are unchanged.

Section Breakdown

Section A: MCQs (12/12)	100.0%
Section B: Short Questions (29/33)	87.9%
Section C: Long Questions (19.3/20)	96.5%
Overall (60.3/65)	92.8%

Strengths - Perfect Section A (12/12) — every MCQ correct, including Q.9 and Q.12 which were nearly hidden by a sloped, numbered-list answer format rather than a bubble panel - Section C was the strongest part of the paper (19.3/20, 96.5%) — neuron diagram, 4-organ-system comparison table, and DNA base-percentage calculation all scored a clean 5/5 - Both diagram-labelling questions fully correct: plant cell (nucleus, chloroplast, vacuole, cell wall) and neuron (dendrites, cell body, axon) with correct impulse directionality - DNA percentage calculation worked through flawlessly with the full Chargaff's/Watson-Crick reasoning and hydrogen-bond counts - Haematopoietic stem cell types (4 of 4) and the diploid/haploid/meiosis explanation both scored full marks with complete reasoning 7 of 11 Section B questions scored a clean 3/3	Areas for Revision - Q.2(xi)OR stopped after covering only 1 of 3 required points on how chewing helps digestion; HCl production and pepsin activation never written — the largest single deduction - RNA "overhung" bases: correctly named single-stranded/ribose/uracil but never explained WHY the bases are overhung - Enzyme pH question: correct optimum pH values quoted but the "why they differ" reasoning and the pH-vs-rate graph shape were both under-explained - Minor unit slip: "100 to 150 of ATP" should read "100 to 150 moles of ATP per day" - Exam technique: Q.3(ii)OR asked for a comparison "using a table" — answered correctly but as paragraphs; practise this as an actual table

Comparison vs Previous Biology Attempts

Date	Exam	MCQ	Total	%	Grade
3 Apr 2026	exam-01-ch1-6	11/12	52/65	80.0%	A
30 Apr 2026	exam-02-ch7 (1st)	12/12	60.5/65	93.1%	A
2 May 2026	exam-02-ch7 (re-sit)	12/12	65/65	100%	A+
8 Jun 2026	exam-03-ch4	12/12	62.5/65	96.2%	A+
23 Jun 2026	exam-07-ch1-7	12/12	57.5/65	88.5%	A
29 Jun 2026	exam-08-ch1-7	12/12	54.5/65	83.8%	A
6 Jul 2026	exam-09-ch1-7	12/12	61.25/65	94.2%	A+
16 Jul 2026	exam-11-ch1-7	10/12	56.4/65	86.8%	A
22 Jul 2026	exam-12-ch1-7 (this exam)	12/12	60.3/65	92.8%	A+

A fresh, previously-unseen full-syllabus Ch1-7 paper (exam-12, Version 1). At 92.8% this clears the 90% A+ boundary and sits well above exam-11 (86.8%). Section A returned to a clean 12/12 on correction, showing exam-11's 10/12 dip was an isolated slip rather than a developing pattern — both misses here were traced to a numbered-list answer format on sloped ruled lines, not wrong bubbles or blank answers. Section C (96.5%) remains Biology's strongest section on this paper, continuing the recent run of strong long-question performance since exam-09.
