MCQ
87.5%

Section Breakdown

Section	Performance	Score
Section A (MCQs)		21/24 (87.5%)
Section B (Short Ans.)		9/9 (100%)
Section C (Long Ans.)		9/10 (90%)

Per-Question Marks

Q	Topic	Awarded	Max	Note
A.1-24	All twenty-four multiple choice	21	24	Q9 stem cells, Q13 what meiosis produces, Q19 glucose. All three confirmed on-SLO
2(i)	Taxonomic ranks; species	3	3	All eight ranks in order, plus the division note for plants. Full marks
2(ii)	DNA structure, base pairing, function	3	3	Answer went beyond the mark scheme. Full marks
2(iii)	Factors influencing enzyme activity	3	3	Three factors named, temperature explained through denaturation
3(i)	Animal cell diagram; animal vs plant	5	5	Ten correct labels against a requirement of six. Both differences correct
3(ii)	Stages of mitosis; mitosis vs meiosis	4	5	Stages perfect; second difference reversed (divisions once/twice swapped)

Syllabus audit

All 24 MCQs were written against the Student Learning Outcomes printed in Seemab's own textbook, and every question she got wrong was re-checked afterwards and confirmed to sit on a stated SLO. Nothing came from another subject or from outside her studied chapters. Full citation table in the marking report and the coverage tracker.

Headline

Her first 43-mark paper and a strong A+.

Section B was flawless

and the animal cell diagram was the best single piece of work on the paper. The three MCQ misses and the one Section C slip are all narrow definition-boundary errors.

Meiosis cost her twice

, in MCQ 13 and again in 3(ii)(b), and is the clearest single thing to revise: meiosis divides

twice

and yields

four

haploid cells.
