

Chemistry Exam 17: Per-Exam Overview

Chapters 1-9 (Full Syllabus) | Seemab Ali | Federal Board (FBISE) Class 9 | Attempt: 2026-08-03 | Version: 6 | Total Marks: 65

12/12 SECTION A (MCQS)	33/33 SECTION B (SHORT)	18/20 SECTION C (LONG)	63/65 TOTAL, 96.9%	A+ GRADE
---------------------------	----------------------------	---------------------------	-----------------------	-------------

Chemistry's 4th-highest score to date, behind exam-15's perfect 100% and the exam-01/exam-16 tie at 98.5%. Section B is a flawless 33/33, only the 2nd perfect Section B the subject has ever produced, and MCQs are a perfect 12/12, the 3rd consecutive perfect MCQ score for Chemistry. Section C drops to 18/20 on two separate slips inside Q.3(iv): an arithmetic error in indoxyl's molar mass, and a subscript transcription slip in its empirical formula.

Section Breakdown

Section A: MCQs (12/12)	100%
Section B: Short Questions (33/33)	100%
Section C: Long Questions (18/20)	90.0%
Overall (63/65)	96.9%

Strengths

- MCQs 12/12, 3rd consecutive perfect MCQ score for Chemistry, after exam-15 and exam-16, including two mid-answer self-corrections (Q.4, Q.5) that both landed correctly
- Section B flawless (33/33), only Chemistry's 2nd-ever perfect Section B, and its first on a paper where the other variant was also fully attempted (Q2(x))
- Both ion-formation questions ($\text{O}^{2-}/\text{Mg}^{2+}$ and S^{2-}) and the AlF_3 dot-and-cross diagram all correct with complete configurations
- Four-pair element classification (Be/Mg, Ne/He, N/P, Li/Na) and both stoichiometry calculations fully correct with working shown
- Electron-dot structure for phosphorus verified correct at high-resolution zoom (all 5 valence electrons present)

Areas for Revision

- Q3(iv)(b) –1:** computed 8×12 as 92 instead of 96 partway through indoxyl's molar mass calculation, giving 129 g/mol instead of the correct 133 g/mol. A pure arithmetic slip, not a conceptual gap.
- Q3(iv)(c) –1:** wrote indoxyl's empirical formula as $\text{C}_6\text{H}_2\text{ON}$ instead of $\text{C}_6\text{H}_7\text{NO}$, a subscript mis-copy (7 read as 2), immediately after using the correct formula one line above.
- Recommendation:** both slips landed back to back inside the same long numerical. Re-check arithmetic and subscripts line by line in multi-step numericals before moving to the next line, rather than only at the end.
- Q2(x) (no marks lost):** main attempt ($\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$ mass) stopped after the molar mass and never finished the final multiplication; the alternative (steam molecules) was completed instead and earned the marks.
- Section C's two-exam perfect streak (exam-15, exam-16) ends here on these two slips.

Comparison vs Previous Chemistry Attempts

Date	Exam	MCQ	Total	%	Grade
12 Apr 2026	exam-01-ch1-2	12/12	64/65	98.5%	A+
17 Apr 2026	exam-02-ch3-5	12/12	59.5/65	91.5%	A+
12 May 2026	exam-03-ch6	12/12	57.5/65	88.5%	A+
12 Jun 2026	exam-04-ch7	12/12	60/65	92.3%	A+
24 Jun 2026	exam-12-ch1-9	12/12	62.5/65	96.2%	A+
30 Jun 2026	exam-13-ch1-9	12/12	60.5/65	93.1%	A+
6 Jul 2026	exam-14-ch1-9	11/12	60.0/65	92.3%	A+
14 Jul 2026	exam-15-ch1-9	12/12	65/65	100%	A+
22 Jul 2026	exam-16-ch1-9	12/12	64/65	98.5%	A+
3 Aug 2026	exam-17-ch1-9 (this exam)	12/12	63/65	96.9%	A+

Chemistry's 4th-strongest paper to date, behind exam-15's perfect 100% and the exam-01/exam-16 tie at 98.5%. This is still the subject's 3rd consecutive perfect MCQ score and only its 2nd-ever perfect Section B. Two separate slips inside Q.3(iv), an arithmetic error and a subscript transcription error, are what separate this attempt from a repeat of exam-16's score.
