Section Breakdown

MCQ Results (All 12 Correct)

#	Topic	Key	Seemab	Result
1	Distributive property: $a(b+c-d)$	B	B	✓
2	Own multiplicative inverse (other than 1)	C	C	✓
3	$\log(x+3) = \log(15x-4) \rightarrow x = 0.5$	A	A	✓
4	Characteristic of $\log 0.00327 = -3$	B	B	✓
5	Common factor: $x(2a+3b+7)+x(2a+3b+5)$	A	A	✓
6	$2a/(a^2-1) - a/(a^2-1) = a/(a^2-1)$	B	B	✓
7	$\sqrt{(36x^6y^{16})} = 6x^3y^8$	C	C	✓
8	Subtract 2 so 4 solves $7x=30$	B	B	✓
9	Solution set of $ x +7=3 = \emptyset$	C	C	✓
10	Distance $A(c,10),B(0,-1)=20 \rightarrow c=3\sqrt{31}$	B	B	✓
11	Midpoint of hypotenuse = $(3/2, -5/2)$	C	C	✓
12	Centre of circle = $(5, 7)$	C	C	✓

2nd consecutive perfect MCQ since the streak reset (Chemistry exam-14). Math MCQ all-time: 95/96 (99.0%).

Per-Question Summary

Question	Variant	Topic	Marks	Earned	Notes
Q2(i)	OR	Equivalent radicals	3	3	$-3, 256, -512$ all correct (stray “or 1/3” noted, no mark lost)
Q2(ii)	Main	Identify the property	3	2.5	$6+0=6$ named “additive property” — missing “Identity” (−0.5)
Q2(iii)	Main	Laws of logarithms	3	3	Expand + combine both correct
Q2(iv)	OR	Evaluate $\log^b(0.024)$	3	3	$= -1.6199$ correct
Q2(v)	OR	Factorize by substitution	3	3	$(y^2+2y+3)(y^2+2y+5)$ correct
Q2(vi)	OR	Cube as product of 3 factors	3	2	$(t+2)^3$ correct, but “each factor is a binomial” not stated (−1)
Q2(vii)	Main	Factorize by substitution	3	3	$(2x^2-3x+11)(2x-5)(x+1)$ correct
Q2(viii)	OR	Solve $5- 5y+1 =-9$	3	3	$\{13/5, -3\}$ correct
Q2(ix)	OR	Compound inequality	3	3	$y > -3/2$ correct
Q2(x)	OR	B midpoint of AC	3	3	$x=-5, y=10$ correct

Q2(xi)	OR	Midpoint find x, y	3	3	x=7, y=2 correct
Q3(i)	Main	Evaluate $\log^b(0.0036)$	5	5	$-2.4438 \rightarrow 3.5562$, mantissa adjustment correct
Q3(ii)	Main	Grouping + cubes & squares	5	5	$(x-2y)(x^2+2xy+4y^2)(p-2q)(p+2q)$ correct
Q3(iii)	OR	Radical eqn + linear eqn	5	5	(a) $\emptyset$ extraneous; (b) $x=-1.3$ — both correct
Q3(iv)	OR	Midsegment / midpoints	5	4.5	D,E, $d(D,E)=4$, $d(B,C)=8$ correct; comparison/midsegment conclusion not stated (-0.5^*)

Headline: a strong first sitting — 62/65 (95.4%, A+) on a fresh 5-unit paper. Perfect MCQ (12/12) and full marks on 12 of the 15 written questions. All 3.0 lost marks come from the same habit: the computation is correct but a required closing statement (name the property, classify the factor as a binomial, state the midsegment relationship) was left unwritten — not a single arithmetic error in the paper.

**Q3(iv) is 3.5/5 in the detailed report (the concluding statement carries 1.5 marks). Row shows the sub-part deduction summarised.*

Performance Strengths

- Perfect MCQ (12/12) — 2nd in a row since the reset; Math MCQ record now 95/96 (99.0%)
- All logarithm work correct, including the hard bar-notation $\log 0.0036 \rightarrow 3.5562$
- Every factorization correct: two substitutions, the cube, and the four-factor grouping
- Recognised the no-solution radical equation ($\emptyset$) with real understanding
- Absolute-value equation, inequality, and all coordinate-geometry midpoints clean

Areas to Improve

- State the closing line (the whole story here):** “Additive **Identity**” not just “additive property”; add “each factor is a **binomial**” after the cube; add “ $d(B,C)=2 \cdot d(D,E)$, so $DE \parallel BC$ (midsegment)” after the two distances
- Recurring pattern:** the same missing-conclusion habit cost marks on the exam-11 papers (rectangle conclusion, counterexample). Fixing this one habit lifts her to essentially full marks
- Minor:** avoid two competing answers on one line (the “or 1/3” and “H.C.F” slips); commit to one boxed answer

Math Subject Performance History

#	Date	Exam	Score	%	MCQ	Sec B	Sec C
1	18 Apr 2026	exam-01-ch1-2	65/65	100%	12/12	33/33	20/20
2	22 Apr 2026	exam-03-ch4-5-7	60.5/65	93.1%	12/12	29.5/33	19/20
3	25 May 2026	exam-04-ch4	57/65	87.7%	12/12	26/33	19/20
4	5 Jun 2026	exam-07-ch8	64/65	98.5%	11/12	33/33	20/20
5	26 Jun 2026	exam-10-ch1-2-4-5-7-10	61/65	93.8%	12/12	32/33	17/20
6	3 Jul 2026	exam-11-ch1-2-4-5-7 (1st attempt)	58.5/65	90.0%	12/12	31.5/33	15/20
7	5 Jul 2026	exam-11-ch1-2-4-5-7 (2nd attempt)	63.5/65	97.7%	12/12	32/33	19.5/20
8	9 Jul 2026	exam-12-ch1-2-4-5-7 NEW	62/65	95.4%	12/12	31.5/33	18.5/20

Subject average after this attempt: $491.5/520 = \mathbf{94.5\%}$ (up from 94.4%). MCQ all-time: 95/96 (99.0%). Math nudges back to the top of the four subjects, a whisker ahead of Physics (94.5%).

Note for parent

This was a brand-new paper covering five units (Real Numbers, Logarithms, Factorization, Linear Equations & Inequalities, Coordinate Geometry), and Seemab handled it very well: 62/65, A+, with a perfect MCQ score and not one calculation mistake in the whole paper. The 3 marks she lost were all the same small thing — she solved each question correctly but didn't write the final one-line conclusion the marker looks for: naming a property in full (“additive *identity*”), classifying a factor as a “binomial”, and stating the midsegment relationship after finding the two lengths. This is the easiest kind of gap to close: her maths is genuinely strong, so a habit of always writing that closing sentence would put her at or near full marks.
