Physics MCQ record rises to **107/108 across all 9 Physics exams (99.07%)**, 1 error total (exam-10). Subject average adjusts to **94.8% (554.5/585, 9 exams)**, holding the #1 subject position just ahead of Chemistry (94.5%).

Strengths on This Attempt

- Perfect Section A (12/12) – 3rd consecutive perfect MCQ score across all subjects.
- 8 of 11 Section B questions and 3 of 4 Section C questions scored full marks with clean, complete working.
- Correct first-principles listing of the three equations of motion with fully defined symbols.
- Momentum conservation (bomb fragments) and manometer pressure numericals both fully correct across every sub-part.

Priority Revision Targets

- Multi-part instructions (–3.5 marks):** Q2(vii) gave examples for only two of three fields (Quantum Mechanics missing); Q2(ix) Pascal's principle stated but never applied to the hydraulic wheelchair lift; Q2(xi)OR geothermal explanation given but the required "advantage over fossil fuels" never stated. Always re-read the full question for every required part before moving on.
- Verification steps (–1 mark):** Q3(i)(c) got the right height (16.2 m) but skipped the requested $v^2=u^2-2gh$ check. Treat "verify using..." as its own required line.
