Physics MCQ record moves to 117/120 across all 10 Physics exams (97.5%), 3 errors total (exam-10, and 2 on this exam). Subject average adjusts to 94.0% (611.0/650, 10 exams), and Physics drops from the #1 subject position (held since 16 July 2026) to #3, now behind Chemistry (94.8%) and Math (94.3%).

Strengths on This Attempt

- Flawless Section C (20/20, 100%) - all four long questions fully correct with complete, correctly-finished working.
- Self-correction habit - two wrong first attempts (Q.2(iii), Q.3(iv)) were caught mid-calculation, crossed out, and fixed before the final answer.
- Layered-liquid pressure and momentum/KE-loss collision numericals both fully correct across every sub-part.

Priority Revision Targets

- Answer the specific numbers given (-2 on Q.2(v)): a correct general definition was followed by self-invented examples instead of the set 18N/25N problem.
- Branches OF physics vs physics APPLIED to other fields (-3 on Q.2(xi)OR): the single largest deduction on the paper.
- Two Section A misses on one paper for the first time - quick refresher on unit dimensional analysis and graph-gradient meanings.
