Section Breakdown

Section	Performance	Score
Section A (MCQs)		11/12 (91.7%)
Section B (Short Ans.)		8/9 (88.9%)
Section C (Long Ans.)		8.5/10 (85%)

Per-Question Marks

Q	Topic	Awarded	Max	Note
A.1-12	All twelve multiple choice	11	12	Q1, Q2, Q4, Q11 voided and awarded after an SLO audit. Only Q9 stands as a genuine miss
2(i)	Resultant of two perpendicular velocities	3	3	5 m/s, vector reasoning correct. New topic, answered right
2(ii)	Two-stage bus: acceleration and total distance	3	3	2 m/s², 100 m + 500 m = 600 m. Flawless
2(iii)	Gravitational field strength; weight on a planet	2	3	29.6 N correct; "would its mass change" left unanswered
3(i)	Conditions of equilibrium; plank and moments	3.5	5	Both conditions perfect; plank's weight put on the wrong side, 127.5 N instead of 82.5 N
3(ii)	Power; crane energy and power output	5	5	204 kJ and 5.1 kW. Completely clean

Four questions voided, all marks awarded (Revision 3, 18 August 2026)

Every MCQ was audited against both the Student Learning Outcomes and the body text of Seemab's textbook. Four failed: **Q1** (height of a door: estimation SLO exists but the book's only estimation task is "estimate your age in minutes and seconds"), **Q2** ("9.50 cm²" and "9.5 cm²" are the same number), **Q4** (SLO B-16 asks her to state that a speed limit exists, not its magnitude) and **Q11** (no Unit 6 SLO covers what a solar cell is made of). The paper rose from 23.5/31 as first issued to **27.5/31 (88.7%, Grade A)**.

Her MCQ work was never the problem

Only five of the twelve MCQs were properly anchored in both an SLO and book content, and **Seemab answered all five correctly**. She also got Q10 and Q12 right despite both being poorly sourced. Her corrected 11/12 sits exactly at her established baseline. The original 7/12 measured my question-setting, not her Physics.

MCQ score re-verified at 300 DPI

7/12 sits far below Seemab's 11-12/12 baseline, so page 8 was re-read letter by letter before this report was issued. Her answers are unambiguous and written as a clean numbered list, with no missing page and no separate grid. Her transcribed answers are **genuine, not a scan artifact**. After the SLO audit only Q9 stands as a genuine miss.

Headline

After four voided questions the paper lands at 88.7%, Grade A, comfortably in her normal range and above the previous Physics low of 85.4%. The written sections held up well at 16.5 of 19. The one remaining MCQ miss, line of action (Unit 4 §4.1), had never appeared in any earlier Physics paper. Her written sections were strong throughout at 16.5 of 19.
