

Seemab: Cumulative Progress Overview

Federal Board Class 9 | All Subjects | All Attempts | Version 32 | Updated: 7 July 2026 | 28 attempts across 4 subjects

Note on this version (v32): Physics exam-09-ch1-6-9 added (64.5/65, 99.2%, A+, deep-checked) — Seemab's **highest-ever physics score** and, outside her three perfect papers, one of her best results in any subject. Only 0.5 was lost in the whole paper (2(x): both kinetic-energy values correct but the “KE $\propto$ v², so 4× greater” relationship not stated). The **perfect 12/12 MCQ restarts the streak** that ended yesterday on Chemistry exam-14 (11/12). With this result **Physics rises to 94.5% and overtakes Mathematics (94.4%) as her strongest subject**. Overall now 93.2% (1696.75/1820). All prior figures carry forward unchanged.

MCQ Trend (per attempt, attempts 1 through 28)

Only 3 MCQ errors across 28 attempts (333/336, 99.1%). Chemistry exam-14 (attempt 27) ended the 13-exam perfect run; Physics exam-09 (attempt 28) is straight back to 12/12, so a new perfect run begins at 1. Prior slips: attempt 1 (Biology exam-01) and attempt 13 (Math exam-07).

Physics Takes the Lead

exam-09 (99.2%) is Seemab’s best physics paper and lifts the subject average to 94.5% (430.0/455 over 7 exams), nudging past Mathematics (94.4%, 429.5/455) into first place. Physics has now scored a perfect 12/12 MCQ on every one of its 7 papers (84/84, 100% all-time) — the only subject with a flawless MCQ record. The comprehensive Ch1-6+9 papers are trending sharply upward: exam-07 90.0% → exam-08 93.8% → exam-09 99.2%.

A Different, Smaller Class of Error

The recurring watch-item across recent papers was leaving a required sub-part blank (Biology exam-08/09, Chemistry exam-14’s 3(ii)(b)). On this physics paper she completed **every** sub-part of every question — nothing skipped. The single 0.5 lost was of a different, milder kind: on 2(x) she computed both kinetic energies correctly but didn’t add the one-line conclusion that doubling the speed makes KE four times greater ($KE \propto v^2$). Worth reinforcing, but a clear step up from the skipped-sub-part habit.
