

Seemab: Cumulative Progress Overview

Federal Board Class 9 | All Subjects | All Attempts | Version 34 | Updated: 14 July 2026 | 30 attempts across 4 subjects

Note on this version (v34): Chemistry exam-15-ch1-9 added, Seemab's first-ever **perfect score in Chemistry**, 65/65 (100%, A+). This is the fourth perfect 100% of her Class 9 journey (after Math exam-01, Biology exam-02 re-sit, and Physics exam-03), and it lifts Chemistry from 93.2% to **94.0%**, closing the gap to the co-leading subjects (Math 94.5%, Physics 94.5%) to under half a point, the narrowest three-way gap yet at the top. Every mark on the paper was earned: Section A, B, and C were all perfect at once, a first for Chemistry. Overall average rises to **93.5%** (1823.75/1950). MCQ record climbs to 357/360 (99.2%), and the current perfect-MCQ streak extends to 3 (Physics exam-09, Math exam-12, Chemistry exam-15).

MCQ Trend (per attempt, attempts 1 through 30)

Only 3 MCQ errors across 30 attempts (357/360, 99.2%). Prior slips: attempt 1 (Biology exam-01), attempt 13 (Math exam-07), attempt 27 (Chemistry exam-14). The current perfect run stands at 3 (Physics exam-09, Math exam-12, Chemistry exam-15).

Chemistry Joins the Podium Conversation.

exam-15 (100%) is a clean first-time-in-the-subject perfect score that lifts Chemistry to 94.0% (489.0/520 over 8 attempts), closing to within half a point of co-leaders Math (94.5%) and Physics (94.5%). All three of Seemab's strongest subjects are now separated by less than one percentage point, and for the first time on a Chemistry paper, Section A, Section B, and Section C were all perfect in the same sitting.

A Zero-Deduction Paper

Chemistry exam-15 is the first attempt across any subject this term with literally nothing marked down: no missing sub-parts, no sign errors, no skipped questions, no mislabelled units costing a mark. The one cosmetic slip (writing "0.2 g/mol" instead of "0.2 mol" in Q.2(i)) cost nothing because the number itself was right, but it is a good habit to tighten. Every recurring pattern flagged on recent Chemistry papers (S/N oxidation states left unattempted, Dalton limitations omitted, thermochemical equations skipped, state symbols missing) was absent here. This is the clearest evidence yet that the "stopping before finishing every sub-part" habit, which has cost marks across Math, Physics, Biology, and Chemistry alike this term, is trending in the right direction.
