

Seemab: Cumulative Progress Overview

Federal Board Class 9 | All Subjects | All Attempts | Version 35 | Updated: 16 July 2026 | 31 attempts across 4 subjects

Note on this version (v35): Biology exam-11-ch1-7 added, a fresh full-syllabus Ch1-7 paper (Version 5), **56.4/65 (86.8%, Grade A)**. MCQ dropped to 10/12, ending Biology's 13-exam streak of 12/12 and Seemab's overall 3-exam perfect-MCQ streak (both misses re-verified genuine at high zoom, not a scan error). Section C was outstanding at 19.5/20 (97.5%), Biology's best long-question result to date. Section B (26.9/33) carried the bulk of the loss, driven by a main/OR mix-up on the cell-division question and one two-part epidermis question answered only halfway. Biology's subject average moves from 90.8% to **90.3%** (469.65/520, 8 attempts), still the weakest subject. Overall average is essentially flat at **93.3%** (1880.15/2015). MCQ record: 367/372 (98.7%).

4 MCQ errors across 31 attempts (367/372, 98.7%). Prior slips: attempt 1 (Biology exam-01), attempt 13 (Math exam-07), attempt 27 (Chemistry exam-14). Newest: attempt 31 (Biology exam-11, 10/12, both misses re-verified genuine at high zoom). The prior 3-exam perfect-MCQ streak (Physics exam-09, Math exam-12, Chemistry exam-15) ends here.

Biology's Section C Turns a Corner, But the Bubble Panel Slips. exam-11 (86.8%) is a mixed result: Section C (19.5/20, 97.5%) is Biology's best long-question performance to date, showing real command of diagram labelling, taxonomic ranks, and lipid/vitamin structure. But Section B (81.5%) and the MCQ panel (10/12, Biology's first sub-12 MCQ score since exam-01) pull the overall grade back down to 86.8%, an A rather than an A+. Biology's subject average dips slightly to 90.3% (469.65/520 over 8 attempts), still clearly the subject needing the most attention, though the underlying long-answer skills are visibly strengthening.

Two Watch-Points From This Attempt

(1) A main/OR mix-up on Q.2(x): the OR header was written, the first half answered correctly against the OR, but the second half switched to content that belongs to the MAIN version of the same question. This is a new variant of the "stopping before finishing every sub-part" pattern seen across other subjects — here it is "finishing the wrong sub-part." (2) A factual reversal on liver cells: writing that they lack cytoplasmic organelles when the textbook explanation is the opposite (an abundance of organelles is precisely why they are metabolically active). Both are flagged as priority revision items; neither reflects a broader comprehension gap, since the surrounding content (e.g. the two liver functions, the taxonomic ranks, the diagram labels) was accurate.
