Three A+ papers, and the syllabus rule is now doing real work

Biology exam-14 (**39/43**) and Maths exam-15 (**41/43**) were the first papers written with every MCQ checked against the Student Learning Outcomes in Seemab's own textbooks. Both scored A+, and every question she got wrong was confirmed on-SLO afterwards, so no question needed voiding and every deduction is genuine.

The same audit was then applied retrospectively to **Chemistry exam-18**, and it found two more out-of-syllabus questions: Chapter 4 has no outcome covering **who discovered the atomic number** or **how many elements are in each period**. Both were voided in her favour, taking that paper from 27/31 to **29/31 (93.5%, A+)** and closing the scribbled-MCQ question that had been left open.

The pattern across all four subjects

Once out-of-syllabus questions are removed, Seemab's MCQ record is **535/552 (96.9%)**, and on both Physics exam-13 and Chemistry exam-18 **she answered every properly in-syllabus question correctly**. Her four genuine misses this round (stem cells, what meiosis produces, glucose, and the sum-of-cubes sign) are all narrow definition-boundary slips. **Meiosis** is the one worth drilling: it cost her twice on the Biology paper. It divides **twice** and yields **four** haploid cells.
