

Chemistry Ch 1.6: Applications, the four examples

Chapter 1, Nature of Chemistry in Science · kitab ke page 7 se 14 · Examples 1.1 se 1.4

Pichhle safhay par teen lafz alag alag samjhe. Ab kitab **chaar misalein** deti hai jahan teenon **ek saath** kaam karte hain. Ye chaaron yaad karein, sawal inhi se aata hai.

#	Misal	Is mein hota kya hai
1.1	Lohe ka zang (rusting)	Loha, hawa ki oxygen aur paani mil kar zang banate hain. Science samajhti hai ke kyun, phir us se bachne ka tareeqa banaya jata hai.
1.2	Solar energy	Tarteeb yaad rakhein: photovoltaic cells → solar panels → poorā nizam . Cell science hai, panel technology hai, aur poorā nizam engineering hai.
1.3	French fries	Organic chemistry amal mein: aalu ke carbohydrates , aur tel ka nikala jana (extraction) .
1.4	Plastic bags	Chhote monomers jur kar polyethylene ka polymer banate hain.

Solar wali misal sab se zyada poochhi jati hai

Kyunke us mein **teen qadam tarteeb se** hain. Ek chhota **photovoltaic cell** roshni ko bijli banata hai. Bohat se cells mila kar ek **solar panel** banta hai. Aur bohat se panels, taarein, batteries aur switches mila kar poorā **infrastructure** banta hai. Chhote se bare ki taraf: cell, panel, nizam.

Plastic bag wali misal mein lafz ka dhyan

Monomer chhota ek unit hai. **Polymer** bohat se monomers ka lamba silsila hai. **Polyethylene** us polymer ka naam hai. Teenon alag lafz hain, ek doosre ki jagah mat likhein.

Quiz

1. Name the four examples your book gives in section 1.6, and write one line on each.
2. For solar energy, write the **three stages in order** from the smallest part to the whole system. Then explain the difference between a **monomer** and a **polymer** using the plastic bag example.
