

Chemistry Ch 1.5: Science, Technology and Engineering

Chapter 1, Nature of Chemistry in Science · kitab ke page 7 se 14

Ye teen lafz roz marra mein ek jaise bol diye jate hain. Kitab in ka **saaf farq** karti hai, aur yehi farq imtihan mein poochha jata hai.

Teenon ki definition

Science: kinaat ke baare mein ilm ko **bananay aur tarteeb denay** ka ek systematic tareeqa.

Technology: us scientific ilm ko **amli kaamon** par lagana: aalaat, machinein aur systems.

Engineering: science aur mathematics ka istemal kar ke systems aur structures **design aur tameer** karna.

Teenon ko alag rakhne ka asaan tareeqa

Science jaanti hai. Technology istemal karti hai. Engineering banati hai.

Ek misal se: bijli ke qawaneen samajhna **Science** hai. Un se bulb banana **Technology** hai. Poore shehar ka bijli ka nizam design karna **Engineering** hai.

Chemical engineers kya karte hain

Kitab khaas taur par chemical engineers ka zikr karti hai. Ye wo log hain jo **banane ke tareeqe (manufacturing processes)** tayar karte hain, aur paanch cheezon ke liye:

chemicals, fuels, food, medicines aur polymers.

Yani lab mein ek chhoti si beaker mein jo amal hota hai, use poore karkhane ke paimane par chalana, wo chemical engineer ka kaam hai.

Quiz

1. Define **science, technology** and **engineering** in the words of your book, and give one example that shows the difference between them.
2. What do **chemical engineers** do, and name the five things your book says they make processes for?
