REVISION

Her best paper of the year

37.5/38 overtakes Physics exam-15 (97.8%) as the highest score of 2026. Two markers worked the script independently, the second without sight of the first, and both reached 37.5. They differed only on which of two half marks to take, and that was settled by reading her letterforms on the scan directly.

Section by section

Section	Score	Note
A: MCQs (10)	10 / 10	All correct, none blank. Shift guard clean at offsets 0, ± 1 , ± 2 .
B: Short (12)	11.5 / 12	Q.2 4/4, Q.3 4/4, Q.4 3.5/4.
C: Long (16)	16 / 16	Q.5 8/8 and Q.6 8/8. Both long questions perfect.
New material, Unit 11	26.5 / 27	98.1% on a chapter started five days ago.
Revision, Unit 8	11 / 11	100%. This half existed to re-test one recorded error.

The re-test result

The exam-25 error is fixed

On exam-25 her largest loss was Q.7: the reaction was reversed and she reused the worked example's value instead of re-deriving direction. Q.6(v) here was built to re-test exactly that. She wrote the reverse equation out, recalculated from the bond energies as $(2 \times 567) - (436 + 155) = 1134 - 591$, and gave

+543 kJ/mol

with the sign explicit and the unit present, plus the correct reason. She derived it twice and got the same answer both ways. Every line of Q.6 carries its unit, which was the other exam-25 loss.

A habit carried across from another subject

On Quran exam-03 (29 September) she answered only half of a two-part question. Q.5(iii) here asked for an explanation *and* a precaution. She gave both: *"Precaution: Keep a window open to provide ventilation."*

The only loss, and one finding worth more than the mark

Item	Lost	Detail
Q.4(iii)	½	Wrote " <i>bcuz it is emitted directly</i> ", meaning " is not ". One dropped word inverted the claim. The following sentence gives the correct mechanism, so the mechanism kept ½ and the misstated reason lost ½.
Q.3	0	Listed carbon dioxide where Figure 11.2 has particulates. Mark given to her: the book contradicts itself, the figure showing particulates and no carbon dioxide while sections 11.2.1 to 11.2.6 give carbon dioxide a section and never mention particulates. Our own paper cited those sections as the syllabus, and our key contradicts itself between Q.3 and Q.5.

Her letter x is written so that it reads as n

Across the script: "*onide*" for oxide, "*mononide*" for monoxide, "*dionide*" for dioxide, "*enothermic*" for exothermic, "*carbonyhamoglobin*" for carboxyhaemoglobin. All the same letter, all the same shape. This is not spelling: her formulas are right and she picked carboxyhaemoglobin correctly in MCQ 5. It was confirmed by comparing against the word

"Oxygen" on her own page 3, where the identical shape sits in a word that can only be oxygen. A board examiner will not make that comparison. This is the single most valuable thing on this script and it is in her report.

Marked 30 September 2026. First pass plus an independent blind second marking. Key released with the report after submission. Answer letters c a d b c a d b c a.
