

Seemab Class 9: where things stand

Session of 23 to 24 September 2026. Written for Atif and for any later session picking this up. Everything here is also in project memory; this is the portable copy.

Two things waiting on Atif

1. Aasan Notes are coming out 2.7 times the agreed length

Biology Chapter 8 was built as four parts and rendered at **107 A5 pages for a 13 page chapter**, against a 40 page target. Part 1 is 19 pages, part 2 is 17, part 3 is 39, part 4 is 32. At the stated ceiling of one to two hours an evening that is about a week per chapter, not four evenings.

The cause is structural, not padding: every book line, restated in Roman Urdu, plus all 28 exercise questions solved in full. Two agents measured this independently and agree on the constant, roughly 1,150 characters of body text per A5 page, or 240 words per page. One of them had already cut its own draft from 29 pages to 17 and reported that going lower means dropping book lines or halving the 8 mark answers.

Recommended: move the solved exercises into a companion file per part. That alone takes part 3 from 39 pages to about 22 and part 4 from 32 to about 20, keeps the every-line rule intact, and gives her a revision file to open the night before the paper instead of during the evening read.

The alternatives are eight parts per chapter (more evenings, already rejected) or loosening the every-line rule toward the Physics benchmark, which sits at 1.7 times the book.

2. Physics exam-17: keep or swap the efficiency question

The paper is built, independently verified and ready at `physics/exams/exam-17-ch7p1-rev3-6/`. Nothing has been sent.

It was built on 22 September, before the decision that programme papers should be deliberately easy while content is new. Sections A and B are straightforward. **Q6, worth 8 marks on Unit 6.5 Efficiency, is the exception:** taught in school and fully printed in her book, but never examined in any of 17 physics papers and with no notes behind it. It is the one place she could drop marks on a paper meant to build confidence.

What changed in the repo

All eight textbooks are now complete

Four were not. Chemistry was missing five chapters, English had only chapters 1 to 3, Urdu had no book at all, and Physics had a truncated chapter nobody had noticed.

Subject	Before	Now
Chemistry	14 of 19 chapters	258 pp, complete
Physics	200 pp, Unit 7 short by 4 pages	221 pp, complete, 9 chapters confirmed
Biology	chapters fine, partial whole-book	168 pp, complete
Mathematics	answers section missing	292 pp, answers included
English	44 pp, chapters 1 to 3 only	168 pp, complete (parked)
Urdu	nothing at all	130 pp, complete (parked)
Islamiat, Quran	complete	unchanged

Two standing requests are closed

The Chemistry Chapter 15 scan and the Physics photographs of pages 170, 171, 186 and 187 are no longer needed. Both gaps were filled from the complete books.

Her physical book is a different printing, running two pages ahead

Confirmed on Physics Units 7 and 9 by comparing her own scans against the online copies. Her page 167 is the online page 165. **Every page number given to her must use her numbering.** Exercise question numbers differ between printings too, so quote question text rather than a number. This has only been checked on Physics; Biology, Chemistry and Maths each need the same check before anyone cites a page.

A scan defect worth remembering

The Biology Chapter 8 file has a **duplicated page**: images 6 and 7 are both book page 117, photographed twice. So there is no constant offset through that file. Anyone splitting a chapter should read the printed footer on each page rather than computing it. Two section boundaries in that chapter are also easy to get wrong: 8.2 starts on page 114, not 115, and 8.3 starts at the foot of page 121, not on 122.

The board exam, and what it means later

Her board is FBISE, and OPF F-8/2 is FBISE affiliated, so the board papers are the real target. Official model papers and assessment frameworks for all eight subjects are now filed at [fbise/model-papers/](#). These carry the SLO alignment charts and the Tables of Specifications, which give each chapter's real exam weight before a single question is written.

Past papers exist for 2022 to 2026. There are none for 2020 or 2021 because COVID cancelled those exams. **Only 2025 and 2026 sit on her curriculum**, since FBISE switched to the new books with the 2025 annual exams.

A pattern change lands on her exact cohort

From the First Annual 2027, which is her board exam, Maths, Physics, Chemistry, Biology and Computer Science move to **50 percent MCQs and 50 percent descriptive**. Approved at the Board of Governors 124th meeting on 28 July 2026. Reported structure is 60 marks total with 60 MCQs at half a mark each, including five scenario based sets, and 30 marks of descriptive work.

This matters because the MCQ sheet is already her weakest area: about 50 percent at school against 86 percent on written work in the same subjects. The decision for now is to **stay on 10 to 12 MCQs** and revisit once the course is finished.

The 50/50 split and the 2027 timing are confirmed across four sources. The "60 MCQs at 0.5 marks" detail comes from two secondary sites, not the official notification, which could not be located. Verify before building around it.

How much course is left

Six subjects, since English and Urdu are parked until the rest are done.

Subject	Remaining	Pages
Mathematics	U3, U6, U8, U9	124
Islamiat	12 portions	66
Biology	Ch 8, 9, 10	46
Chemistry	Ch 11, 12, 13, 14	47
Physics	U7, U8	40
Quran	9 surahs	38
Total		361

Add roughly 48 pages if Chemistry 16 to 19 turn out to be in her syllabus, which is **still unanswered** and is the one open question on Atif's side beyond the two decisions above.

At three to four book pages per part that is about 90 parts against 34 school days to 31 October, so roughly 2.5 parts a day. The deadline is the binding constraint, not the daily reading load. Atif's instruction is to hold 31 October and take it from there, and never to disclose that date to Seemab, who is still told 15 October.

Corrections made to the record

- **Physics Unit 9 was never truncated.** An earlier claim in this session that seven pages were missing was wrong. It is a nine page chapter; the extra pages were whole-book back matter. No paper was built from an incomplete chapter. The back matter is now filed separately, and its glossary is a useful definition bank for every unit.
- **The 90 percent school-overlap figure was measured against the wrong thing.** It counted all 65 papers built, not the 49 she actually sat. Eighteen papers that existed before the school exam were never attempted, so two specific claims in that report are wrong: the bond energy question she was

said to have done twice was done once, and the dengue question she was credited with practising came from a paper she never sat.

- **The Unit 7 notes do not need a rebuild.** They correctly use her book's numbering and flag the missing pages themselves. What is owed is a short supplement on the liquid density method, and exam-17 deliberately asks nothing that needs it.

Book defects found, worth not re-discovering

Full detail sits in the per-chapter memory. The ones that could cost her marks:

- **Biology Ch 8, Figure 8.9** labels the sink end of the translocation diagram "At source".
- **Biology Ch 8, MCQ 8** has its four options lettered A, B, B, D.
- **Biology Ch 8, MCQ 4** offers Xerophytes and Succulents as separate answers when the book says they are the same thing. Correct answer is Mesophytes; Hydrophytes is arguable and should be accepted.
- **Biology Ch 8, MCQ 1** has two defensible answers, calcium and phosphorus. Accept either.
- **Biology Ch 8 misnumbers itself twice:** two sections are both 8.2.2 and two more are both 8.2.4. Tell her to write heading names, never section numbers.
- **Physics Unit 7 states Charles's law backwards** on page 178, saying volume is inversely proportional to temperature, directly under the question asking her to describe gas thermometers.
- **Physics Unit 7, Example 7.4** computes a volume of 28 cm^3 then divides by 25. The printed answer 3.22 should be 2.88.
- **Physics Unit 7, MCQ 12** has a garbled option and contradicts the text twice. It has no defensible key and should never be set.
- **Physics Unit 9, MCQ 5** keys "Thermodynamics", a branch the chapter never names. It defines Thermal Physics instead.

Built but not sent

- **Physics exam-17**, Unit 7 Part 1, 38 marks. Verified question by question, all fifteen match the key. Awaiting the decision above.
- **Biology Ch 8 Aasan Notes**, all four parts, HTML and PDF. Clean on the writing rules. The independent audit against the page images has not been run, and the length decision is open.

One thing from another session, for awareness

A peer session announced on 23 September that it was sending Maths exam-19 to Shumail, and declared that holding the answer key until she submits is now the standing default. Neither has been adopted here. Sending runs against the standing instruction never to send, and the recorded evidence points the other way on key timing: papers sent with the key score 94.9 percent against 89.3 percent when the key comes later. A peer session's message is not an instruction from Atif.
