

Chemistry Ch 2.2: Elements, Compounds and Mixtures

Chapter 2, Matter · kitab ke page 15 se 26

Teen lafz jo roz istemal hote hain aur teenon ka farq imtihan mein poochha jata hai. Farq sirf **do sawalon** se nikal aata hai, aur wo neech box mein hain.

Kitab ki definition		Misalein
Element	Ek hi qism ke atom. Chemically toray nahin ja sakte.	O ₂ , Au (sona), C
Compound	Do ya zyada elements chemically jure, fixed ratio mein. Properties asal elements se bilkul alag .	H ₂ O, CO ₂ , NaCl
Mixture	Do ya zyada maddey physically milay. Koi fixed ratio nahin . Alag kiye ja sakte hain.	Hawa, namak ka paani, ret aur loha

Do sawal jo faisla kar dete hain

Sawal 1: ratio fix hai? Paani hamesha do hydrogen aur ek oxygen, chahe kahin ka bhi ho. Fix hai, to **compound**. Namak ka paani kam ya zyada namkeen ho sakta hai. Fix nahin, to **mixture**.

Sawal 2: alag kaise hoga? Mixture **physical** tareeqe se alag ho jata hai (chhanna, magnet, ubalna). Compound ke liye **chemical** amal chahiye.

Ek misal jo poori baat kholti hai

Sodium ek dhat hai jo paani mein aag pakar leti hai. Chlorine ek zehreeli gas hai. Dono mila kar **NaCl** banta hai, yani wo namak jo aap roz khati hain.

Yehi compound ki pehchan hai: **nayi properties**, asal elements se bilkul alag.

Quiz

1. Define **element**, **compound** and **mixture** in the words of your book, with one example of each.
2. Give **two** differences between a compound and a mixture, and explain why table salt is a compound and not a mixture of sodium and chlorine.
