

Chemistry Ch 4.6: Lanthanides and Actinides

Chapter 4 · kitab ke page 45 se 72

Ye neeche alag kyun chhapi hain

Periodic table ke **neeche** do alag qatarein hoti hain. Ye **bahar** nahin hain, balke asal mein table ke **andar** hi ki hain.

Agar inhein apni jagah par rakha jaye to table itni **chaurai** ho jati hai ke safhay par aati hi nahin. Is liye inhein neeche utar kar chhapa jata hai. Wajah sirf **jagah** ki hai, chemistry ki nahin.

Qataar	Tafseel
Lanthanides	Period 6 , lanthanum ke baad. Inhein rare earth elements bhi kehte hain. Aakhri electron f sub-shell mein jata hai.
Actinides	Period 7 , actinium ke baad. In mein uranium aur plutonium aate hain. Zyadatar radioactive hain.

f block

Dono qatarein **f block** ki hain, kyunke in ka aakhri electron f sub-shell mein jata hai.

Yaad rakhein: **s block** bayein, **p block** dayein, **d block** darmiyan, aur **f block** neeche.

Quiz

1. What are the **lanthanides** and **actinides**, which periods do they belong to, and which block are they in?
2. Why are these two rows printed separately below the main table? Name two actinides.
