#	Subject	Chapters	Date	Score	%	MCQ	Grade
1	Biology	Ch 1-6	2026-04-03	52 / 65	80.0%	11/12	A
2	Physics	Ch 1-2	2026-04-07	63.5 / 65	97.7%	12/12	A+
3	Physics	Ch 3-4, 9	2026-04-10	62 / 65	95.4%	12/12	A+
4	Chemistry	Ch 1-2	2026-04-12	64 / 65	98.5%	12/12	A+
5	Chemistry	Ch 3-5	2026-04-17	59.5 / 65	91.5%	12/12	A+
Cumulative				301 / 325	92.6%	59/60	A+

MCQ streak: 4 perfect 12/12 scores in a row (5 exams total, one 11/12) — near-flawless MCQ performance

Subject-by-Subject

Chemistry

2 exams attempted. Average 95.0% (128 wrong out of 130 total marks — she's at 123.5/130). Exam-01 (98.5%) > Exam-02 (91.5%). Exam-02 was harder terrain (3 chapters vs 2, more long-answer content) and exposed small areas: **periodic trends down a group**, **Rutherford's defects**, and **isotope applications**. All MCQs perfect across both exams.

Physics

2 exams attempted. Average 96.5%. Both A+ grades. MCQs 24/24 perfect. Exam-01 was the strongest (97.7%). No specific weakness pattern — small marks lost on one or two long-answer details per exam.

Biology

1 exam attempted. 80% — Seemab's lowest score so far. Covered Ch 1-6. This was early in the term; she should re-attempt a Bio exam after current chapter (Ch 7 Metabolism) is complete. Focus area for the next revision cycle.

Math

0 exams attempted yet. Exam-01 (Ch 1-2) and Exam-02 (Ch 3-5) were generated earlier. Exam-03 (Ch 4, 5, 7) was

Cross-Exam Patterns

Strengths (consistent across all 5 exams):

- **MCQ mastery** — 59/60 = 98.3%. When Seemab has defined choices, she rarely misses.
- **Definitions and formulas** — recalls and writes them cleanly with textbook precision.
- **Tabular organization** — comparisons (metals vs non-metals, polar vs non-polar, etc.) are consistently clear and well-structured.
- **Worked examples** — includes explicit examples even when not strictly required (e.g., showed Na→Ne config in Q.2(ix)).

Recurring weakness themes:

- **Rushed endings** — last 1-2 long answers lose the most marks (incomplete trend statements, missing "uses" or "applications" sub-parts). Mental checklist at end of each long answer would recover 1-3 marks per exam.
- **Direction of periodic trends** — occasional confusion about "increases vs decreases" when going down a group (especially atomic size). Worth re-drilling with flashcards.
- **Reading each sub-part** of a compound question — when a Q asks for "definition + examples + uses", she sometimes stops at "examples". Underline all sub-parts before answering.

Recommendations for Next Exam

Before the next exam:

- 5-minute flashcard session on **periodic trends directions** (atomic size, IE, EA, EN × across period vs down group = 8 facts).
- Re-read **Rutherford model defects** — make sure all 3 are memorized.
- Add **"uses" to the isotopes flashcard deck** — C-14 (dating), deuterium (heavy water/reactors), I-131 (thyroid), Co-60 (cancer therapy).
- Practice the **finish-every-subpart** discipline: during the exam, underline each sub-part of the question before writing, and check them off as you answer.

Biology re-attempt after Ch 7 (Metabolism) finishes in class — goal is to get Biology above 90%.

Trend: Average drifted from 92.9% (v3, 4 exams) → 92.6% (v4, 5 exams). Small dip, but well within the A+ band. Chemistry difficulty is naturally rising as new chapters come in; Seemab's consistency is the standout. Next re-attempts of weaker subjects (Biology especially) will likely lift the cumulative.

Version history: v1 (initial) → v2 (2026-04-10, 3 exams) → v3 (2026-04-12, 4 exams) → **v4 (2026-04-17, 5 exams)**
