

BIOLOGY: EXAM-17-CH1-7 (VERSION B)

Per-Exam Overview

Seemab | Class 9 | Federal Board (FBISE) | attempted 17 September 2026

36/38 TOTAL	94.7% PERCENTAGE	A+ GRADE	10/10 SECTION A	11/12 SECTION B	15/16 SECTION C
-----------------------	----------------------------	--------------------	---------------------------	---------------------------	---------------------------

WHAT HAPPENED

This is the paper Seemab asked for. The morning version tested only photosynthesis and respiration through scenario questions, and her voice note asked for all chapters in the book's own style. On Version B she scored 36/38 (94.7%), her best Biology percentage since exam-13, with MCQs 10/10 and a full-marks light reactions answer that reproduces the book's five steps and a well-labelled sketch. Both newly taught sections (7.7 and 7.8) are clearly learned.

Where marks went	Marks	Kind
2(i)(a) photosynthesis equation	0.5	Wrote $6C_6H_{12}O_6$: six glucose instead of one, so carbon does not balance
2(i)(b) alcoholic fermentation	0.5	"Ethyl + CO_2 ": the word alcohol missing (she wrote it correctly in 2(iii))
3(ii)(c) meiosis II vs mitosis	1	"divides only once / divide twice" compares mitosis with the whole of meiosis; meiosis II is itself one division

None of the 2 marks is a knowledge gap in the new chapter. Two are equation-writing slips (a stray coefficient and a missing word), and one is answering a broader question than the one asked.

POSITION IN THE SUBJECT

Biology now stands at 91.7% across 14 attempts (742.45 / 810). Lifetime Biology MCQ record 187/198 (94.4%).
