

CHEMISTRY: EXAM-25-CH10-REV6-8

Per-Exam Overview · Second Chapter 10 paper

Seemab · Class 9 · Federal Board (FBISE) · attempted 22 September 2026

Deep check 2026-09-22 corrected the first pass from 47 to 46.5/50 (Q.9(ii)'s intermediate mole result was written with no unit). Separately, the wrong "H3O+ is never an acid" line in the v1 Chapter 10 notes (14:45, corrected 15:40) traces to no lost mark on this paper, H3O+ only ever appears as a product here, and she correctly named the left-of-arrow proton donor as the acid every time regardless.

WHAT HAPPENED

Her second-ever Chapter 10 paper, one week after exam-23's first attempt at this chapter scored 70.0% on the new material. This time **Chapter 10 alone came in at a clean 35/35 (100%)**, and every one of exam-23's targeted re-tests on this chapter is fixed: the acid is always correctly named as the proton donor on the left of the arrow (never the product H3O+, the exact miss on exam-23 Q.2ii), both arrow conventions are used correctly, and every equation is balanced including the second-water coefficient that tripped her up before. Almost all of the revision block is also correct: Q.9's stoichiometry chain is essentially flawless, losing only half a mark to a bare unlabelled intermediate number. The larger miss on the paper is a single deliberately-engineered trap in Q.7 (revision, Chapter 8): the question reverses the book's own worked example, and she carried over the example's bond-energy direction instead of re-deriving it for the reversed reaction, landing on -11 kJ/mol (exothermic) instead of the correct +11 kJ/mol (endothermic).

Where the 3.5 lost marks went	Marks	Kind
Q.7: substitution	1	Bond energies assigned as if solving the book's forward-direction example instead of the reversed reaction actually asked
Q.7: value	1	$\Delta H = -11$ kJ/mol instead of the correct +11 kJ/mol
Q.7: conclusion	1	Called the reaction exothermic; wrong, because it follows from the wrong value (her habit of writing a reasoned conclusion sentence is intact)
Q.9(ii)	0.5	Intermediate mole result "0.1×2 = 0.2" written with no unit; the final mass on the same line (7.3g) is unit-complete

Nearly all of the 3.5 lost marks trace to the single Q.7 trap: only half a mark elsewhere, a unit slip inside an otherwise flawless Q.9.

RE-TEST OUTCOMES

Re-test	Result
MCQ 2, MCQ 4, Q.3(ii), Q.4(i), Q.8: acid always the proton donor on the left, never a product	FIXED
Q.4(ii): ionization direction and arrow choice	FIXED
Q.5(ii): balancing, coefficient on water	FIXED
Q.9: units and a full concluding sentence in a calculation	PARTIAL (mostly fixed, one bare number in (ii))
Q.7: units and a concluding sentence in a calculation	PARTIAL
MCQ 8: ΔH sign (positive = endothermic)	FIXED
Q.7: ΔH sign on a deliberately reversed reaction	NOT FIXED

Of the 7 re-tests listed: 4 FIXED, 2 PARTIAL, 1 NOT FIXED.

SUBJECT PERFORMANCE CARD

Strengths on this paper

- Perfect 10/10 MCQs, independently re-derived
- Chapter 10 alone: 35/35 (100%), up from 70.0% on exam-23
- Bronsted acid always correctly named (proton donor, not product) in all 6 places it was tested
- All equations balanced, both arrow types used correctly
- Q.9's 6-part stoichiometry chain essentially flawless with a complete concluding sentence

Areas needing work

- Re-deriving bond-energy direction when a reaction is reversed from a worked example, rather than reusing the example's numbers (Q.7)
- Labelling every intermediate number with its unit, not just the final answer (Q.9ii)

COMPARISON: PREVIOUS CHEMISTRY ATTEMPT

Exam	Date	Score	%	MCQ
exam-23-ch10-rev4-6-8-9	21 Sep 2026	36/50	72%	9/10
exam-25-ch10-rev6-8	22 Sep 2026	46.5/50	93.0%	10/10

A 21-point jump in one week, on the same chapter. This is the clearest possible evidence that Chapter 10 is now consolidated: every re-test built into this paper from exam-23's misses landed or mostly landed, except the one item designed to be the hardest (a reversed-reaction bond-energy sign).

Chemistry now stands at **91.3%** across **17 exams** (904.5/991) after this attempt, still comfortably an A-average subject. Lifetime Chemistry MCQ record: **250/276 (90.6%)**.
