

MATHEMATICS: EXAM-19-CH6-10-11					
Per-Exam Overview					
Seemab • Class 9 • Federal Board (FBISE) • attempted 23 September 2026					
43/50 TOTAL	86.0% PERCENTAGE	A GRADE	8/10 SECTION A	20/24 SECTION B	15/16 SECTION C

WHAT HAPPENED

Seemab sat Paper 19 (Unit 11 Basic Statistics, Unit 10 Practical Geometry, and Unit 6 sections 6.1–6.2), the same day it was set. **Lead result: Unit 6, the part not yet taught in class, came back a perfect 11/11.** Question 8, the 8-mark grouped-data question, was a fully self-checking 8/8 (mean, median and mode all landed on 25.5, as the data was designed to force). Question 9, the construction, scored 7/8: the compass technique (angle bisectors, in-centre) is sound and O lands correctly inside the triangle, but the ruler-drawn base AB measured about a centimetre short of the required 6 cm, confirmed independently by two measurements at 300 DPI against a 1 cm grid, costing one accuracy mark. This is the mark on the paper most open to challenge, since it rests on a dewarped scan rather than the original notebook page.

The one thing that stands out most on this paper is Question 6, the probability question, left entirely blank. It is worth 4 marks, more than every other loss combined, and it is the first time probability (Unit 11, section 11.3) has ever been examined in any of her maths papers. Tellingly, she answered both probability MCQs (9 and 10) correctly, so it looks like the written format, not the idea, that tripped her. Two MCQs were also lost to confusable-pair mix-ups: right bisectors versus altitudes of a right triangle, and mode versus class mark (she used "mode" correctly herself two questions earlier).

UNIT-BY-UNIT PERFORMANCE

Unit 6 (not yet taught)		100%
Unit 10 (Geometry)		86.7%
Unit 11 (Statistics)		79.2%

Unit 6, the portion not yet covered in class, scored a perfect 11/11. Units 10 and 11 were taught at school but examined by us for the first time on this paper; probability specifically (inside Unit 11) had never been tested before and accounts for 4 of Unit 11's 5 lost marks. Unit 10's loss is one MCQ mix-up plus the single Q.9 ruler-accuracy mark.

WHERE MARKS WERE LOST

ITEM	MARKS	KIND
Q.6 probability (marbles)	4	Not attempted, first-ever probability question
MCQ 5 (right bisectors)	1	Confused with where the altitudes meet
MCQ 8 (mode)	1	Wrote "class mark" instead
Q.9(i) construction base	1	AB drawn at about 5 cm, not the required 6 cm

All 43 earned marks came with correct, complete working. Nothing beyond the one measured side was lost to arithmetic slips, missing units, or an unfinished sentence.

SUBJECT PERFORMANCE CARD: MATHEMATICS

STRENGTHS SHOWN ON THIS PAPER	AREAS TO REVISE
- Angle–radian conversions and sector formulas (Unit 6), fully self-taught ahead of class - Grouped-data mean, median and mode, self-checking answer landed exactly right - Angle bisector construction and in-centre placement: correct technique, O lands inside the triangle - Clean, complete definitions in her own words (altitude, median, orthocentre, centroid ratio)	- Probability: P(E), complementary events, expected frequency, entirely untested until now despite both probability MCQs being correct - Points of concurrency: right bisectors vs altitudes of a right triangle - Mode vs class mark terminology (a reading slip: she used "mode" correctly herself two questions earlier) - Measuring each constructed side against the ruler before moving on to the next step - Using the exact value of π a question specifies, even when a more precise one is also correct

COMPARISON WITH PREVIOUS MATHEMATICS ATTEMPT

EXAM	DATE	SCORE	%	GRADE
exam-18-ch1-2-4-5-7 (Version B)	15 Sep 2026	32.5/38	85.5%	A
exam-19-ch6-10-11 (this attempt)	23 Sep 2026	43/50	86.0%	A

Up 0.5 percentage points on exam-18, and on a paper where two of the three units had never been examined before and one had not even been taught yet. Mathematics now stands at 92.7% across 15 attempts (810.0/874), second behind Physics. Lifetime Maths MCQ record moves to 181/198 (91.4%). The Q.9 ruler mark is open to challenge and can be revised against the original notebook page.
