Chemistry exam-22: the big fixes held, the small habits did not

Chemistry exam-22 came in at **42/50 (84.0%, A)**: MCQs 9/10, Section B 20/24, Section C 13/16. It was the school-mirror shape (10 MCQs, six 4-mark shorts, two 8-mark longs), so 40 of the 50 marks were written work, which is why the percentage sits below her MCQ score.

The paper was built to re-test nine of her real past errors, and six came back fixed. On exam-20 she inverted the oxidizing and reducing agents; here she named CuO and NH₃ correctly as whole molecules. On exam-21 she said a catalyst changes ΔH ; here she wrote that it lowers E_a and does not change ΔH . Four of her five exam-21 MCQ misses were re-set as MCQs and she got four right: Bohr versus orbitals, electron affinity versus ionization energy, giant covalent versus simple molecular, and the neutron/proton emission pair. She also wrote a reason beside MCQs 1 to 5, and on Q3 and Q5 the reason is a correct elimination of the wrong twin.

Still not fixed. The catalyst-to-process list (she picked platinum for margarine; last time she picked nickel for Haber) and the state-symbols habit (a perfectly balanced combustion equation with no (g) or (l), after the question asked for them in bold). Group versus period is **half fixed**: for the s-block element she wrote “8 + 10 = 18”, then struck out the +10 and the 1, leaving Group 8 where Group 2 is correct; she applied +10 correctly to the p-block element.

Where the other marks went is mostly stopping short of the full instruction: no figures quoted when a question said “using the data”, no “activation energy” label and no catalysed curve on an energy diagram, plus two slips on work she understands ($x + 3(1) = 0$ written as $x - 3 = 0$, and writing 6.98×10^{23} g where the answer is 6.97×10^{-23} g).

Five marks rest on judgement calls and are listed in the exam-22 marking report for Atif to rule on. The score can move between 40.5 and 45. If it changes, this version stays as it is and a v62 is issued.

Priorities for the next fortnight

- State symbols and “using the data”.** Tick off every instruction in a question before moving on. This is the one habit that has survived every other fix.
- The catalyst table as one unit:** iron = Haber; nickel = margarine; platinum and palladium = catalytic converters; platinum = Contact process.
- Group from configuration:** s block, group = valence electrons; p block, valence electrons + 10. $3s^2$ means Group 2.
- Check signs:** when solving for an oxidation number, and on powers of ten for the mass of a single molecule.
- Keep writing the concluding sentence (broken after six papers on Chemistry exam-21, and it held again here: every calculation ended with a labelled answer).
- Check the option letter against your own reason; the product rule for radicals (Maths exam-17); a geometry box for Unit 10; Islamiat Bab 3 Seerat facts; Tarjuma-tul-Quran, write the Arabic with the meaning; Biology Q12/Q17 recall. All carried forward unchanged from v60.

Marking method

Chemistry exam-22 was marked from the 9-page CamScanner scan. Every mark-deciding item was re-read at 400 DPI with contrast enhancement, and all ten MCQ keys were re-derived independently from the rendered question paper. The v60 figures for the other five subjects were carried forward exactly as published; nothing else changed. Built after confirming with both live class-9 sessions that no other attempt was being marked, so this version is complete.

Version history (most recent)

Version	Date	Headline
v59	14 Sep 2026	Tarjuma-tul-Quran at first-pass 42/50 alongside Islamiat exam-02; no Biology exam-16 yet
v60	14 Sep 2026	All three 13 September attempts final: Quran 43/50, Biology exam-16 34/36, Islamiat exam-02 30/46
v61	14 Sep 2026	Chemistry exam-22 added at 42/50; six of nine re-set chemistry errors fixed

Full lineage v1 through v61 is retained, unedited, in seemab-reports/; no prior version is ever overwritten or deleted.
