

CUMULATIVE PROGRESS OVERVIEW | VERSION 67

Seemab: Class 9 Performance Overview

Federal Board (FBISE) + Punjab Curriculum & Textbook Board (PECTAA/PCTB) | All Subjects | Version 67

Generated 21 September 2026 | Chemistry exam-23 (36/50, B) added to v66 — corrected in place after a blind deep check

CORRECTED IN PLACE, same day (2026-09-21). This v67 replaces an earlier v67 build (35.5/50) that was never sent or committed. A blind deep check on Chemistry exam-23 found two factual misreads in the first pass: Q.2(ii) was read as "H2O" where the scan clearly shows "H3O" (subscript 3), and the Q.9 energy diagrams were read as having reactants and products at the same height, when the products line is genuinely drawn lower in both diagrams. Both were resolved directly against the scan during the independent deep check. Corrected score: **36/50 (72%, B)**, up from 35.5/50. No other figures in this overview changed.

Chemistry exam-23: first paper of the whole-book program, 36/50

Chemistry exam-23 (Version B) came in at **36/50 (72%, B)**: MCQs 9/10, Section B 18.5/24, Section C 8.5/16. This is the first exam ever built as 70% brand-new content (Chapter 10, the second half: oxides, hydroxides and neutralization — **24.5/35, 70.0%**) plus 30% deliberately re-served weak spots (**11.5/15, 76.7%**) from earlier papers. It is her first Chemistry score under 80%, but the pattern behind it is reassuring rather than alarming: every one of the paper's built-in re-tests improved. All three targeted MCQs (the catalyst list, the s-block group/period rule, and dynamic-equilibrium rates) landed correctly, and state symbols — an instruction she had never fully followed before — were consistent across every equation on the paper (Q4 and Q6). The lost marks are concentrated in genuinely new material: two ionization equations written backwards, naming the acidic product H3O+ rather than the proton donor HCl as the Bronsted acid, forgetting that oxygen is diatomic (O2), and giving a correct formula where the question asked for an English name (Q.8, Q.6ii). The missing-conclusion-sentence habit appeared once, localized to the Q.7 calculation, not across the whole of Section B.

Priorities for the next fortnight

- Ionization goes one way: acid → ions.** Two equations on exam-23 were written backwards (ions combining into the acid); the reversible-vs-single arrow choice itself was right, only the direction was wrong.
- Name the proton donor, not the product, as the Bronsted acid.** In Q.2(ii) she labelled H3O+ (the product) as the acid instead of HCl (the actual donor) — a specific, re-drillable confusion.
- Name it, not just formula it.** Marks were lost in both Q.8 and Q.6(ii) because a correct chemical formula was given where the question explicitly asked for the English name.
- Oxygen is O2, not O.** Both burning equations on exam-23 (sodium and magnesium in oxygen) missed the diatomic subscript.
- ΔH belongs on every energy diagram,** labelled by name, alongside Ea — carried forward from exam-22 and still not resolved on exam-23, even though the products-below-reactants and catalysed-curve parts are now fixed.
- Carried forward: equation coefficients and full product names in Biology; Maths ordered pairs and log-law names; Islamiat exam-02's unapplied +1 correction on Q15 (still 30/46 pending Atif's go-ahead).

exam-03-bab1-2-3-4-6-7	18 Sep 2026	32.5/38	85.5%	A	

MCQ: 26/40 (65.0%). Unchanged since v65. Exam-02 still carries the verified +1 correction on its Q15 (40 km), pending Atif's go-ahead — **not applied here**; it is carried forward at 30/46 unchanged, as instructed.

Marking method. Chemistry exam-23 was marked from the 6-page CamScanner scan, read at 200 DPI with targeted crops up to 400–1000% zoom on every handwritten equation, MCQ bubble and diagram label. All three sections (MCQs, Section B, Section C) and their sub-parts were present in order with no gaps. The version she attempted (B) was confirmed from her own Q.8 content (oxides/hydroxides/neutralization) rather than assumed. A first pass scored 35.5/50; a blind deep check then re-derived Q.2(ii) and the Q.9 diagrams directly from the scan and found two misreads (a subscript read as 2 instead of 3, and two diagram heights read as level when the products line is genuinely lower), resolved directly against the source images during the independent deep check. Corrected score: **36/50**. The v66 figures for the other five subjects are carried forward exactly as published. No other class-9 session had published a v68 at the time of this correction.

Version history (most recent)

Version	Date	Headline
v65	18 Sep 2026	Islamiat exam-03 added at 32.5/38; MCQs 9/10 against 17/30 on exam-02
v66	19 Sep 2026	Tarjuma-tul-Quran exam-02 added at 33/38; Musa AS and Firaun 8/8 on Surah Taha's first test
v67	21 Sep 2026	Chemistry exam-23 added; first paper of the whole-book program (70% new Ch 10 + 30% revision); all three targeted MCQ re-tests fixed, state symbols fixed for good; corrected in place same day from 35.5 to 36/50 after a blind deep check found two misreads

Full lineage v1 through v67 is retained, unedited except for this same-day in-place correction to v67 itself (never sent or committed before the fix), in seemab-reports/; no prior version is ever overwritten or deleted. Islamiat exam-02 still carries the unapplied +1 correction on its Q15.
