

CUMULATIVE PROGRESS OVERVIEW | VERSION 68

Seemab: Class 9 Performance Overview

Federal Board (FBISE) + Punjab Curriculum & Textbook Board (PECTAA/PCTB) | All Subjects | Version 68

Generated 22 September 2026 | Chemistry exam-25 (46.5/50, A) added to v67: second Chapter 10 paper, deep-checked

Deep check 2026-09-22, same day as the build. The first pass scored Chemistry exam-25 at 47/50. An independent deep check re-verified the key crop against the scan and found Q.9(ii)'s intermediate mole result, " $0.1 \times 2 = 0.2$ ", was written with no unit (misquoted in the first pass as "0.2 mol"); the paper's HIDAYAAT #5 and the key's own note on this question both take ½ mark off for a missing unit. Corrected score: **46.5/50 (93.0%, A)**, down from 47. Nothing was sent or committed before this correction, so v68 is corrected in place; no v69 was created. Full range and every other verbatim quote correction are in the exam's own report.pdf.

Chemistry exam-25: second Chapter 10 paper, 46.5/50, Chapter 10 now 100%

Chemistry exam-25 came in at **46.5/50 (93.0%, A)** after the deep check above: MCQs 10/10, Section B 21/24, Section C 15.5/16. This is the second paper built on Chapter 10 (Acids, Bases and Salts), one week after exam-23's first attempt scored 72% overall with the new-chapter portion alone at 70.0%. This time **the Chapter 10 portion scored a clean 35/35 (100%)**, and every one of exam-23's targeted re-tests on this chapter landed: the Bronsted acid is now always correctly named as the proton donor on the left of the arrow, never the product H3O+ (the exact miss on exam-23 Q.2ii); both single and reversible arrows are used correctly; every equation is balanced, including the second-water coefficient that was missed before; and Q.9's six-part stoichiometry chain closes with the exact concluding sentence the question asked for, losing only half a mark to one unlabelled intermediate number. The larger miss on the paper is a single deliberately-engineered trap in the revision block (Q.7, Chapter 8): the question reverses the book's own worked bond-energy example, and she carried over the example's direction rather than re-deriving it for the reversed reaction, landing on -11 kJ/mol (exothermic) instead of the correct +11 kJ/mol (endothermic). A fairness check confirmed the wrong "H3O+ is never an acid" line in an earlier draft of her Chapter 10 notes (corrected the same afternoon) cost her nothing on this paper.

Priorities for the next fortnight

- Re-derive bond-energy direction when a reaction is reversed from a worked example**, rather than reusing the example's numbers. This is the main miss on exam-25 (Q.7) and is the same "direction" error family as exam-23's backwards ionization equations, now appearing in a different calculation.
- Label every intermediate number with its unit, not just the final answer.** Q.9(ii) on exam-25 left " $0.1 \times 2 = 0.2$ " bare even though the final mass on the same line carries "g" correctly: a narrower version of the units habit than the fully-fixed final-answer case.
- FIXED on exam-25, drop from the list:** ionization direction (acid → ions) and naming the proton donor rather than the product as the Bronsted acid: both held perfectly across six separate items on this paper.
- Carried forward, not re-tested this round: **name it, not just formula it** (Q.8/Q.6ii on exam-23), and **oxygen is O2, not O** (exam-23 Q.8i).
- Carried forward: **ΔH belongs on every energy diagram**, labelled by name, alongside Ea: last tested on exam-22/exam-23; exam-25 had no diagram question so this stays open.
- Carried forward: equation coefficients and full product names in Biology; Maths ordered pairs and log-law names; Islamiat exam-02's unapplied +1 correction on Q15 (still 30/46 pending Atif's go-ahead).

exam-25-ch10-rev6-8	22 Sep 2026	46.5/50	93.0%	A	NEW · CORRECTED

MCQ: 250/276 (90.6%). Exam-22 stays at 42/50 until Atif rules on its five judgement calls; exam-23 is 36/50 (72%) after a blind deep check; exam-25 (second Chapter 10 paper) is 46.5/50 (93.0%) after its own same-day deep check corrected a missing unit in Q.9(ii): MCQs 10/10, Chapter 10 alone 35/35 (100%), most of the remaining loss is a single deliberately-reversed bond-energy question in the revision block (Q.7). exam-24 (Chapter 11) remains built and sent but ON HOLD, not marked, per Atif's 2026-09-21 instruction.

exam-02-bab1-2-3-4-6-7	13 Sep 2026	30/46	65.2%	B	CONFIRMED FINAL
exam-03-bab1-2-3-4-6-7	18 Sep 2026	32.5/38	85.5%	A	

MCQ: 26/40 (65.0%). Unchanged since v65. Exam-02 still carries the verified +1 correction on its Q15 (40 km), pending Atif's go-ahead: **not applied here**; it is carried forward at 30/46 unchanged, as instructed.

Marking method. Chemistry exam-25 was marked from the 8-page CamScanner scan, read at 200 DPI with targeted crops up to 300–1000% zoom on every handwritten equation, MCQ bubble and calculation line. All three sections (MCQs, Section B, Section C) and their sub-parts were present in order with no gaps; the MCQ list was found as a plain numbered list on the last page, per her usual habit. Every MCQ option was independently re-derived from the exam paper itself (not just checked against the key) before comparing to her answers; all 10 matched the key with no misreads or key errors found. A first pass scored 47/50; a same-day deep check re-verified the key crop against the scan and found Q.9(ii)'s intermediate result " $0.1\times 2 = 0.2$ " had no unit, corrected to 46.5/50. A fairness check confirmed that a wrong "H3O+ is never an acid" line in an earlier draft of her Chapter 10 notes cost her no marks on this paper, and that none of her Q.5 equations matches the three unbalanced worked examples printed in the book. Chemistry now stands at 904.5/991 (91.3%) across 17 exams. The v67 figures for the other five subjects are carried forward exactly as published. No other class-9 session had published a v69 at the time of this correction.

Version history (most recent)

Version	Date	Headline
v66	19 Sep 2026	Tarjuma-tul-Quran exam-02 added at 33/38; Musa AS and Firaun 8/8 on Surah Taha's first test
v67	21 Sep 2026	Chemistry exam-23 added; first paper of the whole-book program (70% new Ch 10 + 30% revision); all three targeted MCQ re-tests fixed, state symbols fixed for good; corrected in place same day from 35.5 to 36/50 after a blind deep check found two misreads
v68	22 Sep 2026	Chemistry exam-25 added; second Chapter 10 paper, corrected in place same day from 47 to 46.5/50 (93.0%, A) after a deep check found a missing unit in Q.9(ii); Chapter 10 alone now 35/35 (100%) , up from 70.0% on exam-23 one week earlier; perfect 10/10 MCQs; the remaining loss is mostly a single deliberately-reversed bond-energy question (Q.7)

Full lineage v1 through v68 is retained, unedited except for the earlier same-day in-place correction to v67 itself (never sent or committed before that fix), in seemab-reports/; no prior version is ever overwritten or deleted. Islamiat exam-02 still carries the unapplied +1 correction on its Q15.

END
