Mathematics exam-19: Unit 6 comes back perfect, probability the clear next target

Unit 6, the one part of exam-19 not yet taught in class, came back a flawless 11/11. Mathematics exam-19 scored 43/50 (86.0%, A) overall: Section A (MCQs) 8/10, Section B 20/24, Section C 15/16. The paper covered three units: Unit 11 Basic Statistics, Unit 10 Practical Geometry, and Unit 6 sections 6.1 to 6.2. Unit 10, taught at school but never examined by us before, held at 13/15 (86.7%) with one confusable-pair MCQ slip (right bisectors of a right triangle versus its altitudes) and one construction accuracy mark. Unit 11 landed at 19/24 (79.2%), and the entire gap there is one MCQ (mode versus class mark, a reading slip: she used "mode" correctly herself elsewhere on the same script) plus Question 6, the marbles probability question, which does not appear anywhere in her notebook. Probability (Unit 11, section 11.3) has never once been examined in any of her maths papers before this one, so the skip reads as unseen territory rather than a lapse, and it is, on its own, the single largest loss on the paper at 4 of the 7 marks dropped; she answered both probability MCQs correctly on the same paper. Section 8 (the grouped-data question) self-checked cleanly with mean, median and mode all landing on exactly 25.5, a full 8/8. Question 9 (construction) scored 7/8: the compass technique and in-centre placement are sound, but two independent 300 DPI measurements against a 1 cm grid agree the ruler-drawn base AB came out close to 5 cm rather than the required 6 cm, a full centimetre outside tolerance, costing one accuracy mark. That mark rests on a dewarped scan and is the one most open to challenge; a ruler on the original notebook page would settle it, and if Question 6 turns up on a missed page the ceiling becomes 47/50.

Priorities for the next fortnight

- Probability (Unit 11, section 11.3): P(E) = favourable/total, complementary events (1 – P), expected frequency = n × p.** New from exam-19: left entirely blank, the largest single loss on the paper, and her first time seeing this topic on any maths paper.
- Points of concurrency in a right-angled triangle:** right bisectors (meet at the mid point of the hypotenuse) versus altitudes (meet at the vertex of the right angle). New from exam-19 (MCQ 5), the exact confusable pair the paper's own answer key flags as the common trap.
- Mode vs class mark terminology.** New from exam-19 (MCQ 8): two legitimate Unit 11 terms, different definitions, mixed up once, though she used "mode" correctly herself two questions later on the same script, so this reads as a reading slip rather than a knowledge gap.
- Measure each constructed side against the ruler before moving on.** New from exam-19 (Q.9(i)): the compass technique was sound, but the drawn base AB came out close to a centimetre short of the required 6 cm, turning an intended scalene triangle into an isosceles one.
- Re-derive bond-energy direction when a reaction is reversed from a worked example, rather than reusing the example's numbers. Chemistry exam-25's main miss (Q.7).
- Label every intermediate number with its unit, not just the final answer. Chemistry exam-25 Q.9(ii) left one intermediate result bare.
- Carried forward: equation coefficients and full product names in Biology; Maths ordered pairs and log-law names (exam-18); Islamiat exam-02's unapplied +1 correction on Q15 (still 30/46 pending Atif's go-ahead).

MCQ: 181/198 (91.4%). Exam-19 scored 8/10: right bisectors vs altitudes (MCQ 5) and mode vs class mark (MCQ 8) were the two misses. Written work lost one further mark on Q.9(i), the constructed base measuring short; that mark is open to challenge pending a check against the original notebook page.

exam-03-bab1-2-3-4-6-7	18 Sep 2026	32.5/38	85.5%	A	

MCQ: 26/40 (65.0%). Unchanged since v65. Exam-02 still carries the verified +1 correction on its Q15 (40 km), pending Atif's go-ahead: not applied here; it is carried forward at 30/46 unchanged, as instructed.

Marking method

Mathematics exam-19 was marked from the 8-page CamScanner scan, read as page images at 200 DPI, with the MCQ list (page 8) and the Q.3(ii) area figure re-checked at 200 to 250% crop zoom before being recorded. A blind second marker independently worked the same script; the two passes agreed on the total after reconciling one item. Every MCQ option and every sub-part was worked from the exam paper and the answer key's method, not just compared to the printed answer. Question 6's absence was investigated directly: Q.5 and Q.7 sit with no gap on page 4, though the last line of page 7 is clipped by the scan crop, so a missing page between Q.9 and the MCQs cannot be fully excluded; the evidence still points to a genuine skip, "not attempted", worth 0/4, and the score would rise to 47/50 if a missed page turns up. Question 9's construction was independently re-measured at 300 DPI against a 1 cm grid: the compass work (bisectors, in-centre) is correct, but the drawn base AB measures close to 5 cm against a required 6 cm, a full centimetre outside tolerance, costing one accuracy mark; this is flagged as the mark most open to challenge, since it rests on a dewarped scan rather than the original notebook page. Mathematics now stands at 810.0/874 (92.7%) across 15 attempts, second behind Physics. The v68 figures for the other five subjects are carried forward exactly as published.

Version history (most recent)

VERSION	DATE	HEADLINE
v67	21 Sep 2026	Chemistry exam-23 added; first paper of the whole-book program (70% new Ch 10 + 30% revision); all three targeted MCQ re-tests fixed, state symbols fixed for good; corrected in place same day from 35.5 to 36/50 after a blind deep check found two misreads
v68	22 Sep 2026	Chemistry exam-25 added; second Chapter 10 paper, corrected in place same day from 47 to 46.5/50 (93.0%, A) after a deep check found a missing unit in Q.9(ii); Chapter 10 alone now 35/35 (100%), up from 70.0% on exam-23 one week earlier; perfect 10/10 MCQs; the remaining loss is mostly a single deliberately-reversed bond-energy question (Q.7)
v69	23 Sep 2026	Mathematics exam-19 added, 43/50 (86.0%, A) after reconciling a blind second marker's measurement of Q.9; Unit 6 (angle measurement and sector of a circle), not yet taught in class, scored a perfect 11/11; the probability question (Unit 11, section 11.3, first ever tested) was left entirely blank and is the paper's single largest loss at 4 marks; two confusable-pair MCQ misses (right bisectors vs altitudes, mode vs class mark) plus one construction accuracy mark on Q.9(i), open to challenge

Full lineage v1 through v69 is retained, unedited except for the earlier same-day in-place correction to v67 itself (never sent or committed before that fix), in seemab-reports/; no prior version is ever overwritten or deleted. Islamiat exam-02 still carries the unapplied +1 correction on its Q15.

END
