Performance Analysis — Geometry of Straight Lines

STRENGTHS

- Section B fully recovered: 33/33 (was 26/33 in the previous exam). All 11 short questions answered correctly across a wide range of techniques.
- All six standard forms of a straight line derived correctly in Q3(ii) — the normal form $\sqrt{61}$ calculation and symmetric form both shown with working.
- Family-of-lines method (Q2xi) correctly applied for the first time on an exam.
- Verification discipline: 180° angle check in Q3(iii) and three-slope collinearity check in Q2(iv) both done spontaneously.
- Real-world application (Q3iv OR): slope interpreted verbally with correct economic meaning — a skill that is often skipped.

AREAS TO REVISE

- Q2 MCQ (gradient of horizontal line):** Chose D ($m = -1$) instead of C ($m = 0$). A horizontal line sits at 0° inclination; $\tan 0^\circ = 0$. The value -1 is the gradient of a line inclined at 135° . This is a single concept to memorise: horizontal = 0, vertical = undefined.
- The 11-exam consecutive perfect MCQ streak (from exam 2 through 12) ends here at 11. Overall MCQ record remains strong at 166/168 across 13 attempts.

Comparison vs Previous Math Attempts							
Date	Exam	MCQ	Sec B	Sec C	Total	%	Grade
18 Apr 2026	exam-01-ch1-2	12/12	33/33	20/20	65/65	100%	A+
22 Apr 2026	exam-03-ch4-5-7	12/12	28.5/33	20/20	60.5/65	93.1%	A+
25 May 2026	exam-04-ch4	12/12	26/33	19/20	57/65	87.7%	A
5 Jun 2026	exam-07-ch8 (today)	11/12	33/33	20/20	64/65	98.5%	A+

Trajectory note: This is Seemab's strongest Math result since the perfect exam-01 back in April. After the Section B deductions in exam-03 (28.5/33) and exam-04 (26/33), the return to 33/33 in Section B is a clear signal that the formula-precision issues identified in those exams have been addressed. Section C has been perfect in all four Math exams. The single MCQ error (horizontal gradient) is the only mark dropped from 65. The Math subject average rises from 93.6% (3 exams) to 94.9% (4 exams) with this result.
