MCQ Record: 178/180 (98.9%). The 11-exam consecutive perfect MCQ streak (exams 2 through 12) ended on Math exam-07-ch8 (exam 13): Seemab chose D (gradient = -1) for Q2 about the gradient of a horizontal line; correct answer is C (gradient = 0). Today's Biology exam-03-ch4 restores a perfect 12/12 MCQ score. Overall MCQ mastery remains exceptional at 98.9% across 180 questions. Best streak: 11 consecutive 12/12 (exams 2-12).

Physics: (97.7 + 95.4 + 100) / 3 = 98.3%. Math: (100 + 93.1 + 87.7 + 98.5) / 4 = 94.9%. Chemistry: (98.5 + 91.5 + 88.5) / 3 = 92.8%. Biology (best attempt per paper): 80.0% (exam-01) + 100% (exam-02 re-sit) + 96.2% (exam-03, today) = 276.2 / 3 = 92.1%. Biology rises from 90.0% to 92.1% with this result.

Consistent Strengths

- MCQ mastery: 178/180 (98.9%); 11 consecutive perfect 12/12 (exams 2-12)
- Section C (long questions): perfect 20/20 in 12 of 14 attempts
- Three perfect 65/65 scores across three subjects (Math-01, Bio-02 re-sit, Phys-03)
- Prophase I detail (Biology): synapsis, bivalent, chiasmata, crossing over all placed precisely
- G0 phase with permanent/temporary cell examples (Biology, new this exam)
- Tabular comparison layouts: clean, distinct, always accurate
- All six standard forms of the straight line (Math)
- Family-of-lines technique (Math, first appeared exam-07-ch8)
- Mass-mole interconversions (Chemistry, fully automatic)
- Enzyme inhibition and metabolism mechanisms (Biology)
- Verification discipline: checks answers spontaneously

Recurring Weakness Patterns

- Centromere functional statement (Biology, new):** Q.3(ii) — all four mitosis stages described but no standalone sentence "centromere splits at anaphase, separating sister chromatids." Costs 1 mark on any karyokinesis Section C question.
- Gradient of horizontal line (Math):** $\tan 0^\circ = 0$, not -1. One MCQ error on exam-07-ch8.
- Sum-of-cubes middle term (Math):** middle term -ab confused with -2ab; seen in exams 3 and 4.
- Sophie Germain identity completion (Math):** sets up correctly but stops before the final difference-of-squares step.
- Sign discipline in bracket expansion (Math):** -k(a-b) sign errors in exam-04.
- Ionic notation (Chemistry):** charges and state symbols missing in equations.
- Atom count chain (Chemistry):** molar mass reused in step 2 of mass-moles-atoms chain.

Trajectory note for parents: Today's Biology result (96.2%, exam-03-ch4 Cell Cycle) is Seemab's best first-attempt Biology score and the fourth-highest overall. Cell Cycle is widely considered the most technically demanding chapter in Class 9 Biology, requiring detailed descriptions of four mitosis stages, all five meiosis I stages, G0 phase, and six comparison criteria. Seemab dropped only 2.5 marks out of 65 on a single attempt. Biology subject average rises from 90.0% to 92.1%, narrowing the gap with Chemistry (92.8%). The only deductions were fine structural points (centromere functional statement and an interphase II consequence sentence), not content gaps. Both are single-sentence fixes. MCQ performance rebounds to 12/12 after the one-mark miss on Math exam-07.
