

Chemistry Ch 1.1: Definition of Chemistry

Chapter 1, Nature of Chemistry in Science · kitab ke page 7 se 14

Ek sawal se shuru karte hain. Aap ke ghar mein doodh rakha reh jaye to kharab ho jata hai. Loha baarish mein rakha rahe to zang lag jata hai. Roti tawe par pak kar bhoori ho jati hai. **Teenon mein ek hi cheez ho rahi hai.** Kya? Jawab is safhay par hai.

Kitab ki definition, yehi likhni hai

Chemistry wo science hai jo **kainaat ke maddon (materials of the universe)** ka mutalea karti hai aur un tabdeeliyon ka jo un mein aati hain.

Ye teen cheezon se taalluq rakhti hai: maddey ki **composition** (kis cheez se bana hai), **structure** (kaise juda hua hai), aur **properties** (wo karta kya hai), aur saath hi maddey aur energy mein aane wali **tabdeeliyan**.

Yaad rakhne ka tareeqa

Physics poochhti hai cheez **harkat** kaise karti hai. Biology poochhti hai cheez **zinda** kaise rehti hai.

Chemistry poochhti hai cheez **badalti** kaise hai, aur badalne ke baad wo kya ban jati hai.

Doodh, loha aur roti, teenon mein maddah badal raha hai. Isi liye teenon Chemistry hain.

Green Chemistry

Kitab ek aur istilah deti hai: **green chemistry**. Ye chemistry ki wo shakl hai jo **khatarnaak maddon (hazardous substances) ka istemal kam** karti hai.

Yani maqsad sirf ye nahin ke cheez ban jaye, balke ye bhi ke banate waqt zameen aur hawa ko nuqsan kam se kam ho.

Teen lafz jo alag alag hain

Composition: paani hydrogen aur oxygen se bana hai.

Structure: un do hydrogen aur ek oxygen ka aapas mein jurne ka andaz.

Properties: paani sau digree par ubalta hai aur cheezon ko ghol leta hai.

Sawal mein teenon ke naam aa sakte hain, is liye teenon ka farq yaad rakhein.

Quiz

1. Define **chemistry** in the words of your book, and name the three things about matter that it studies.
2. What is **green chemistry**? Give one reason why it matters.
