

BIOLOGY — EXAM-15-CH1-7

Per-Exam Overview

Seemab · Class 9 · Federal Board (FBISE) · Attempted 21 August 2026

39/43

TOTAL

90.7%

PERCENTAGE

A+

GRADE

21/24

SECTION A

8/9

SECTION B

10/10

SECTION C

WHAT HAPPENED

Twenty-one of twenty-four MCQs, eight of nine in Section B and **a perfect 10/10 in Section C**. This is her strongest written performance of the year and her sixth A+ in Biology.

The meiosis item is closed

Meiosis dividing twice and producing four haploid cells cost her marks twice on exam-14. It was re-tested here deliberately from two angles, an MCQ and a full five-mark question running a 20-chromosome cell through both divisions with a flow chart. **She got both in full**, named meiosis I as the reduction division, and finished by stating the products are haploid and will form gametes.

The nucleotide diagram

Three marks, and she took all three: phosphate group, pentose sugar and nitrogenous base all drawn and labelled, with the phosphate placed at the **5th carbon** and the base at the **1st carbon**, stated in words beneath the drawing. She followed it with hydrogen bonds, 2 for A-T, 3 for C-G, and the sugar-phosphate backbone.

The four marks she lost

Where	Marks	What happened
Q14, MCQ	1	Gave the plant answer, phragmoplast, to an animal cytokinesis question. Cleavage furrow.
Q2, MCQ	1	Chose “theory” where the definition given was of a scientific law .
Q19, MCQ	1	Chose “saturated”, which describes a fatty acid, where “ hydrophobic ” describes lipids as a class.
Q.2(iii)	1	Took DNA’s role from the RNA row directly beneath it in Table 6.1. Her location was right, and she described DNA’s real function correctly on the very next page.

One question on this paper was defective, and her marks were restored

Q.2(ii) asked for **three** advantages an animal cell gains from having no cell wall, “as listed in your textbook”. The comparison table in her Chapter 3 clearly gives only **two**. She was not deducted for the third. Without that restoration this paper would read 38/43.

POSITION IN THE SUBJECT

Biology now stands at **91.4%** across **12 attempts** (672.45 / 736). Her lifetime Biology MCQ record is **159/168 (94.6%)**. Biology remains her fourth subject by average, but the gap is closing: this is her second A+ in a row and the written sections are now consistently her strongest.
