

SINGLE ATTEMPT REPORT • EXAM-20-CH1-9 • DEEP-CHECK VERIFIED

Chemistry | Chapters 1 to 9 (Comprehensive)

Revision Test 2026 | SSC-I (9th Grade) | Version 1 | 71-mark, 60-MCQ no-choice paper
Candidate: Seemab | Date: 22 August 2026 | Total Marks: 71

59 / 71	83.1%	A	49 / 60
TOTAL SCORE first 71-mark paper	PERCENTAGE	GRADE	MCQ 81.7%

Section Breakdown

Section	Performance	Score
Section A (MCQs)	Sixty questions, the widest sweep of Chapters 1–9 she has sat. Nine of the eleven losses are on material examined once before or never	49/60 (81.7%)
Section B (Short)	Flawless. Percentage composition to N ₂ O ₄ , and the NH ₃ dot-and-cross with bond and lone pairs counted correctly	6/6 (100%)
Section C (Long)	Four of five parts perfect; the only loss is the state symbols she did not write	4/5 (80%)

Chapter Profile

Chapter	Score	Note
Ch1 Nature of Chemistry	4/4	Includes three essential-question items never examined before
Ch2 Matter	5/5	Clean
Ch3 Atomic Structure	8/10	Proton emission; Rutherford force balance
Ch4 Periodic Table	11/13	Group vs period rule, the same confusion twice
Ch5 Chemical Bonding	9/10	Recovered from four losses on exam-19
Ch6 Stoichiometry	9/11	Every numerical correct; both losses are formula/naming
Ch7 Electrochemistry	3/5	Oxidizing and reducing agent inverted
Ch8 Energetics	0/2	Two questions only, on the chapter’s last unused clauses

The finding that matters

Chapter 5 bonding, which accounted for four of her seven MCQ losses on exam-19 and was flagged then as a single-chapter gap, came back at **9 out of 10**. That gap is closed. What replaces it is narrower and easier to fix: she is mixing the **group** rule with the **period** rule (Q21 and Q30), and she has the **oxidizing and reducing agent inverted** (Q55, Q57).

Read the percentage with the format in mind

Section A carries 60 of the 71 marks on this paper, against 12 of 65 on the papers that built most of her record. Her written work was near-perfect — 6/6 and 4/5 — and the one mark she lost there was for stopping before the last instruction, not for anything she could not do.

One read left open

On the ammonia diagram the lone pair on nitrogen cannot be cleanly separated from the adjacent bonding pair, because the ruled lines of the page cross that region. The mark was awarded on her correct written count of “3 bond pairs, 1 lone pair”. Read the other way, the paper is 58/71 (81.7%).
