

Answer Key: Confusing Pairs Drill

40 MCQs · 9 September 2026 · Seemab ke liye

Seemab, pehle poora paper khud hal karo, phir ye key kholo.

Har jawab ke saath maine chhoti si wajah bhi likhi hai, sirf letter nahi. Wajah parhna zyada zaroori hai kyunke asal masla yaad karna nahi, **do milti julti cheezon mein farq pehchanna** hai.

Jo sawal ghalat ho, us par nishaan laga lo. Ek hafte baad sirf wohi wale dobara hal karna. Agar dobara bhi ghalat ho, to matlab wo jori ab tak ulti baithi hui hai, aur us par thora aur waqt lagana hoga.

Jaldi check karne ke liye

Sawal	Jawab
1 to 10	1-a 2-c 3-d 4-c 5-a 6-d 7-a 8-b 9-c 10-c
11 to 20	11-c 12-d 13-a 14-d 15-c 16-b 17-d 18-c 19-a 20-c
21 to 30	21-b 22-d 23-b 24-a 25-b 26-b 27-d 28-d 29-b 30-a
31 to 40	31-c 32-c 33-d 34-b 35-a 36-b 37-a 38-d 39-b 40-a

Chemistry (1 to 16)

Q	Ans	Wajah
1	a	Electron affinity mein atom electron leta hai aur energy bahar aati hai. Option (b) ionization energy hai, yani us ki ulti cheez.
2	c	Electron nikalne ke liye energy deni parti hai. Kuch bhi zabardasti nikalna ho to zor lagana parta hai.
3	d	Oxidizing agent doosre ko oxidize karta hai, is liye khud reduce hota hai aur electron leta hai. Hamesha ulta socho.
4	c	Mg electron deta hai ($\text{Mg} \rightarrow \text{Mg}^{2+}$), to Mg khud oxidize hua, is liye Mg hi reducing agent hai.
5	a	$1s^2 2s^2 2p^4$ mein sab se bara shell number 2 hai, to period = 2. Period sirf shells ginta hai.
6	d	Valence electrons = $2 + 4 = 6$. Ye p-block hai, to group = $6 + 10 = 16$. Sirf "6" likhna wohi ghalti hai jo exam-20 mein do baar hui thi.
7	a	Quantum model orbits ko hata kar orbitals laya, jahan sirf imkaan (probability) bataya jata hai. Fixed circular orbits Bohr ka purana model hai.
8	b	Orbit = raasta (line). Orbital = ilaqa jahan electron milne ka imkaan sab se zyada hai.
9	c	Diamond ka poora crystal ek hi giant covalent network hai, is liye torne ke liye bohut saari strong bonds torni parti hain. Option (a) simple molecular ka bayan hai, jo asaani se pighal jata hai.
10	c	Iodine chhote alag molecules se bana hai jin ke beech weak forces hain. Diamond aur SiO_2 giant covalent hain, NaCl ionic hai.
11	c	Catalyst naya raasta deta hai jis mein activation energy kam ho. Wo garmi nahi barhata aur khud khatam nahi hota.
12	d	ΔH bilkul wahi rehta hai. Catalyst pahar mein surang banata hai, lekin shuru aur aakhir ki jagah nahi badalta. Ye wohi misconception hai jo exam-21 mein hui thi.
13	a	Metal mein free (delocalized) electrons ka samundar hota hai jo solid halat mein bhi hil sakta hai.
14	d	Ionic compound mein ions solid halat mein jakre hue hote hain. Sirf molten ya solution mein azad ho kar bijli chalatay hain.
15	c	CH_2O ka mass = $12 + 2 + 16 = 30$. Phir $180 \div 30 = 6$. To formula = $\text{C}_6\text{H}_{12}\text{O}_6$.
16	b	Moles hamesha molecular formula ke mass se nikaltay hain. Empirical use karna wohi ghalti hai jo exam-18 mein hui thi.

Physics (17 to 23)

Q	Ans	Wajah
17	d	Gradient (dhalan) = acceleration . Dhalan tezi dikhata hai, aur acceleration bhi tezi hai. Ye tumhari sab se purani ghalti hai.
18	c	Neeche ka area = distance . Area ek jagah ghairta hai, aur distance bhi jagah hai. Yehi jori yaad rakho: gradient $\rightarrow$ acceleration, area $\rightarrow$ distance.
19	a	Ufq lakeer ka matlab dhalan zero, yani acceleration zero , magar speed constant chal rahi hai. Body ruki hui nahi hai.
20	c	Displacement vector hai: kitna aur kis taraf, dono. Distance sirf kitna batata hai.
21	b	Sirf weight badalta hai kyunke $W = mg$ aur chaand par g kam hai. Mass har jagah wahi rehti hai.
22	d	Pehle mass nikalo: $m = 600 \div 9.8 = 61.2$ kg. Phir chaand par: $W = 61.2 \times 1.62 = \text{taqreeban } 99 \text{ N}$.
23	b	Physical balance mass naapta hai. Spring balance weight naapta hai, kyunke wo khinchao (force) par chalta hai.

Maths (24 to 34)

Q	Ans	Wajah
24	a	$\sqrt{50} = 5\sqrt{2}$ aur $\sqrt{18} = 3\sqrt{2}$. Ab $5\sqrt{2} + 3\sqrt{2} = 8\sqrt{2}$. Radical ke andar wale numbers seedha jama nahi hotay.
25	b	$\sqrt{12} = 2\sqrt{3}$ aur $\sqrt{27} = 3\sqrt{3}$. Ab $2\sqrt{3} + 3\sqrt{3} = 5\sqrt{3}$. Pehle simple karo, phir jama karo.
26	b	$ -9 = 9$ aur $ 4 = 4$, to $9 + 4 = 13$. Khari lakeerein bracket nahi, zero se faasla hain, aur faasla minus nahi hota.

27	d	$ -6 = 6$ aur $ -2 = 2$, to $6 - 2 = 4$. Pehle dono ko positive banao, phir minus karo.
28	d	$9x^2 - 12x + 4 = (3x - 2)^2$, to square root = $\pm(3x - 2)$. $\pm$ lagana zaroori hai , tumhari kitaab Unit 4 Example 29 mein bhi $\pm$ likha hai.
29	b	Teenon hisson mein 1 jama karo: $-4 \leq 2x \leq 8$. Phir teenon ko 2 se taqseem: $-2 \leq x \leq 4$. Minus ki alamat mat girao.
30	a	Teenon mein se 2 nikalo: $-9 < 3x \leq 9$. Phir 3 se taqseem: $-3 < x \leq 3$. Alamat bhi wahi rakho ($<$ aur $\leq$).
31	c	$(3x)^2$ ka matlab $3x \times 3x = 9x^2$. Bracket ke andar jo poora hai, wo square hota hai, sirf x nahi.
32	c	$(4y)^2 = 4y \times 4y = 16y^2$. Wohi usool: number bhi square hota hai.
33	d	$3^{-2} = 1 \div 3^2 = 1/9$. Minus power ka matlab ulta karo , jawab ko minus mat banao.
34	b	$5^{-1} = 1 \div 5 = 1/5$. Yaad rakho: minus power kabhi jawab ko negative nahi banata.

Biology (35 to 40)

Q	Ans	Wajah
35	a	Purines = Adenine aur Guanine , dono mein do ring hote hain. Yaad karne ka tareeqa: Pure Aur G .
36	b	Pyrimidine mein ek ring hota hai (C, T, U). Naam lamba hai magar ring chhota, is liye ulta yaad rakho.
37	a	Mitosis se 2 cells bantay hain aur chromosomes same rehtay hain (diploid). Ye body cells ke barhne aur marammat ke liye hai.
38	d	Meiosis se 4 cells bantay hain, chromosomes aadhay (haploid), aur crossing over se variation paida hoti hai.
39	b	Somatic ka matlab jism ka koi bhi cell hai (gamete ke ilawa), sirf "animal cell" nahi. Ye lafz exam-09 mein ghalat likha gaya tha.
40	a	Metaphase mein chromosomes cell ke beech wali equatorial plate par lagtay hain. Spelling "equatorial" hai (equator se), "equilatoral" nahi.

Apna score dekho

Score	Matlab
35 to 40	Bohot khoob. Ye joriyan ab theek baith gayi hain. Ek hafte baad sirf ghalat wale dobara dekh lena.
28 to 34	Acha hai. Jo ghalat huay un ki jori upar wale safhon se dobara parho aur agle hafte dobara try karo.
28 se kam	Fikar ki baat nahi. Iska matlab sirf ye hai ke ye sheet tumhare liye theek waqt par aayi hai. Roz sirf 10 sawal karo, poora ek saath nahi.

Sab se ahem baat: MCQ karte waqt **rough kaam kaghaz par likho**, sirf dimagh mein hisaab mat karo. Maths ke paper mein tumhare MCQs 60% thay, aur Chemistry mein jab tum ne likh kar kiya to 83% ho gaye. Ye farq sirf likhne se aaya hai.
